| <b>UHPLC/HPLC/SFC Columns .....</b>                           | <b>1</b> |  |
| Column Selection Guide .....                                  | 2        |  |
| Selection by USP Code .....                                   | 7        |  |
| <br>  |          |  |
| <b>Shim-pack Series Columns</b>                               |          |  |
| <b>Reversed Phase</b>   |          |  |
| XR Series .....   | 8        |  |
| VP Series .....   | 12       |  |
| MAqC-ODS.....   | 16       |  |
| GIST C18.....   | 18       |  |
| GIST C18-AQ .....   | 20       |  |
| GISS C18.....   | 22       |  |
| GIS C18.....  | 24       |  |
| GIS C18-P.....  | 26       |  |
| GIS RP-Shield .....   | 28       |  |
| GIST C8.....  | 29       |  |
| GIST Phenyl.....  | 31       |  |
| GIST Phenyl-Hexyl .....                                       | 33       |  |
| GWS C18 .....   | 41       |  |
| Solar Series .....  | 42       |  |
| FC-ODS.....   | 43       |  |
| <b>Normal Phase</b>   |          |  |
| XR SIL.....   | 8        |  |
| GIST NH2.....   | 37       |  |
| GIS CN .....  | 39       |  |
| <b>SFC</b>  |          |  |
| SFC Series and Kits .....                                     | 45       |  |
| Chiral.....   | 49       |  |
| Achiral.....  | 51       |  |
| <b>HILIC Mode</b>   |          |  |
| GIS HILIC .....   | 35       |  |
| <b>GPC</b>  |          |  |
| GPC Series.....   | 55       |  |
| <b>Gel Filtration</b>   |          |  |
| Diol Series .....   | 57       |  |
| <b>Ion Exchange</b>   |          |  |
| IC Series.....  | 58       |  |
| ISA/ISC Series .....  | 64       |  |
| WAX/WCX Series .....  | 65       |  |
| <b>Ion Exclusion</b>  |          |  |
| SCR Series.....   | 63       |  |
| <b>Dedicated Columns</b>                                      |          |  |
| Analysis of Amino Acids .....                                 | 62       |  |
| Analysis of Sugar and Organic Acid.....                       | 63       |  |
| Analysis of Nucleotides, Oligonucleotides<br>and Protein..... | 65       |  |
| <b>Pretreatment Columns</b>                                   |          |  |
| MAYI Series.....  | 66       |  |
| SPC Series.....   | 68       |  |
| <b>Preparative Columns</b>                                    |          |  |
| PREP Series.....  | 69       |  |
| G Series .....  | 70       |  |

|   |           |
|---|-----------|
| <b>NexLeaf Columns</b>  |           |
| <b>Cannabis Analysis Columns</b>                                  |           |
| Pesticides .....  | 71        |
| Potency .....   | 71        |
| <b>Mobile Phase Cleaner</b>                                       |           |
| Ghost Trap DS/DS-HP.....  | 72        |
| <b>Vials, Accessories, Solvent Kits and Fittings .....</b>        | <b>73</b> |
| <b>1.5mL screw vials</b>  |           |
| Vials.....  | 73        |
| Caps and Septa.....   | 75        |
| Vial Kits.....  | 75        |
| Micro-insert .....  | 75        |
| <b>4mL screw vials</b>  |           |
| Vials.....  | 76        |
| Caps and Septa.....   | 76        |
| Vial Kits.....  | 76        |
| <b>Head Space vials</b>   |           |
| 10mL / 20mL screw vials .....                                     | 77        |
| Screw caps/Septa .....  | 77        |
| Screw vial kit .....  | 77        |
| 10mL / 20mL crimp vials.....                                      | 78        |
| Crimp caps/Septa.....   | 78        |
| Crimp vial kit .....  | 79        |
| Crimper/Decapper.....   | 79        |
| <b>EPA vials</b>  |           |
| Vials.....  | 79        |
| <b>LabTotal Vial MS Certified Kit .....</b>                       | <b>80</b> |
| <b>Dedicated Pretreatment Vials for CLAM-2000 .....</b>           | <b>81</b> |
| <b>Microtiter Plates.....</b>                                     | <b>82</b> |
| <b>Solvent Bottles and Cap Kits .....</b>                         | <b>84</b> |
| <b>LC/LCMS Solvent Waste Kits .....</b>                           | <b>85</b> |
| <b>Fittings .....</b>   | <b>86</b> |
| Ultrashield Pre-column Filter.....                                | 86        |
| Nexlock Finger-Tight Fittings .....                               | 87        |
| Selection of HPLC/UHPLC Fittings .....                            | 88        |
| <b>Sample Preparation .....</b>                                   | <b>90</b> |
| Eppendorf Research Plus Pipettes - Single Channel - Variable..... | 90        |
| Pipette Tips - Reloads.....                                       | 90        |
| Conical Tubers .....  | 90        |
| Syringe Filters.....  | 91        |
| <b>GC Columns and Consumables .....</b>                           | <b>92</b> |
| <b>GC Column Structures.....</b>                                  | <b>94</b> |
| <b>GC Column Cross-Reference Table .....</b>                      | <b>95</b> |
| <b>SH Series</b>  |           |
| SH-Rxi™-1MS .....   | 97        |
| SH-Rxi™-5MS .....   | 98        |
| SH-Rxi™-1HT .....   | 99        |
| SH-Rxi™-5HT .....   | 99        |
| SH-Rxi™-5Sil MS .....   | 100       |
| SH-Rxi™-XLB .....   | 101       |
| SH-Rxi™-17 .....  | 102       |
| SH-Rxi™-35Sil MS .....  | 102       |
| SH-Rxi™-17Sil MS .....  | 103       |
| SH-Rxi™-PAH .....   | 103       |
| SH-Rxi™-624Sil MS .....   | 104       |
| SH-Rxi™-1301Sil MS .....  | 105       |
| SH-Rtx™-1 .....   | 106       |
| SH-Rtx™-PONA .....  | 106       |
| SH-Rtx™-5 .....   | 107       |
| SH-Rtx™-5MS.....  | 108       |
| SH-Rtx™-20 .....  | 109       |

|   |            |
|---|------------|
| SH-Rtx <sup>TM</sup> -35/SH-Rtx <sup>TM</sup> -35MS .....                 | 110        |
| SH-Rtx <sup>TM</sup> -50 .....  | 111        |
| SH-Rtx <sup>TM</sup> -65 .....  | 111        |
| SH-Rtx <sup>TM</sup> -1301 .....  | 112        |
| SH-Rtx <sup>TM</sup> -624 .....   | 112        |
| SH-Rtx <sup>TM</sup> -1701 .....  | 113        |
| SH-Rtx <sup>TM</sup> -200 / SH-Rtx <sup>TM</sup> -200MS .....             | 114        |
| SH-Rtx <sup>TM</sup> -225 .....   | 116        |
| SH-Rtx <sup>TM</sup> -2330 .....  | 116        |
| SH-Rt <sup>TM</sup> -2560 .....   | 117        |
| SH-Rtx <sup>TM</sup> -Wax .....   | 118        |
| SH-Stabilwax <sup>TM</sup> .....  | 119        |
| SH-Rtx <sup>TM</sup> -1614 .....  | 120        |
| SH-Rtx <sup>TM</sup> -OPP2 .....  | 121        |
| SH-Rtx <sup>TM</sup> -CLP / SH-Rtx <sup>TM</sup> -CLP II .....            | 122        |
| SH-Rtx <sup>TM</sup> -VMS .....   | 123        |
| SH-Rtx <sup>TM</sup> -PCB .....   | 124        |
| SH-FAMEWAX <sup>TM</sup> .....  | 125        |
| SH-Rtx <sup>TM</sup> -BAC Plus 1 / SH-Rtx <sup>TM</sup> -BAC Plus 2 ..... | 126        |
| SH-Rtx <sup>TM</sup> -5 Amine / SH-Rtx <sup>TM</sup> -35 Amine .....      | 127        |
| SH-Stabilwax <sup>TM</sup> -DA .....                                      | 128        |
| SH-Stabilwax <sup>TM</sup> -DB .....                                      | 129        |
| SH-Rt <sup>TM</sup> -Silica BOND .....                                    | 130        |
| SH-Rt <sup>TM</sup> -Alumina BOND /NA2SO4 .....                           | 131        |
| SH-Rt <sup>TM</sup> -Alumina BOND /KCl .....                              | 131        |
| SH-Rt <sup>TM</sup> - Msieve 5A .....                                     | 132        |
| SH-Rt <sup>TM</sup> -Q-BOND .....   | 133        |
| SH-Rt <sup>TM</sup> -U-BOND .....   | 133        |
| SH-MXT <sup>TM</sup> -1 .....   | 134        |
| SH-MXT <sup>TM</sup> -5 .....   | 134        |
| SH-MXT <sup>TM</sup> Biodiesel TG .....                                   | 134        |
| Integra-Guard <sup>TM</sup> Columns .....                                 | 135        |
| SH-Rxi <sup>TM</sup> Guard / Retention Gap Columns .....                  | 136        |
| SH-Particle Trap .....  | 136        |
| <b>GC Packed Columns .....</b>  | <b>137</b> |
| ShinCarbon ST Columns .....   | 138        |
| Molecular Sieve 5A/13X .....  | 138        |
| Micropacked GC Columns .....  | 140        |
| RT-XL Sulfur Columns .....  | 141        |
| Porous Polymer Columns .....  | 142        |
| <b>Syringes .....</b>   | <b>143</b> |
| Syringe for AOC-20i/20s and AOC-20i plus / 20s plus .....                 | 146        |
| Syringe for AOC-5000 Plus .....   | 146        |
| Syringe for AOC-6000 .....  | 146        |
| Manual Syringe .....  | 147        |
| Syringe for Gas Analysis .....  | 147        |
| Micro Solid Phase Extraction Syringe MEPS <sup>TM</sup> .....             | 148        |
| <b>GC Inlet Liners .....</b>  | <b>150</b> |
| Glass Insert for Capillary Column Analysis .....                          | 151        |
| Glass Insert for OCI/PTV .....  | 152        |
| Glass Insert for Packed Column Analysis .....                             | 152        |
| GC Consumables Kit .....  | 153        |
| Injection Port Septum .....   | 154        |
| Ferrules .....  | 155        |
| <b>Gas Filtration .....</b>   | <b>157</b> |
| Connection Diagrams .....   | 160        |
| Installation Kits .....   | 162        |
| Replacement Filters .....   | 164        |
| COMBI Filters .....   | 166        |

|  |            |   |            |
|--|------------|---|------------|
| Base Plates .....                      | 167        | <b>Appendix .....</b>   | <b>185</b> |
| Base Plate Accessories.....            | 168        | Characteristics of Caps/Septa.....  | 185        |
| Gas Filter System Components .....     | 169        | Bouguer-Lambert-Beer's Law, UV<br>Configurations, Detector Transition<br>Wavelengths, and Absorption Bands for<br>Common Functional Groups..... | 189        |
| <b>Spectroscopy Consumables.....</b>   | <b>170</b> |   |            |
| Lamps (UV-Vis-NIR).....                | 171        |   |            |
| Lamps (Fluorescence) .....             | 171        |   |            |
| <b>Cuvettes .....</b>                  | <b>172</b> |   |            |
| Standard Cells.....                    | 172        |   |            |
| Semi-micro Cells .....                 | 172        |   |            |
| Rectangular Long Pathlength Cells..... | 173        |   |            |
| Short Pathlength Cells .....           | 173        |   |            |
| Micro Cells .....                      | 174        |   |            |
| Ultra Micro Cells.....                 | 174        |   |            |
| Cylindrical Cells .....                | 175        |   |            |
| Flow Cells.....                        | 176        |   |            |
| Stirrer Cells .....                    | 177        |   |            |
| Tray Cell .....                        | 177        |   |            |
| Starna DMV-Bio Demountable             |            |   |            |
| Micro-Volume Cell.....                 | 178        |   |            |
| Disposable .....                       | 179        |   |            |
| Multicells .....                       | 180        |   |            |
| Hellmanex III - Cleaning Solution..... | 180        |   |            |
| Fluorescence Only .....                | 181        |   |            |
| Other Consumables.....                 | 182        |   |            |
| FTIR Consumables .....                 | 183        |   |            |

## Column Selection by Target Compounds

| Water-soluble Vitamins        |  |
|-------------------------------|--|
| Vitamin B1 (thiamin)          | UV (270 nm)<br>RF (Post-column derivatization) |
| Vitamin B2 (riboflavin)       | UV (270 nm)<br>RF (Post-column derivatization) |
| Vitamin B3 (niacin)           | UV (260 nm)                                    |
| Vitamin B5 (pantothenic acid) | UV (205 nm)                                    |
| Vitamin B6 (pyridoxine)       | UV (290 nm)                                    |
| Vitamin B12 (cyanocobalamin)  | UV (280 nm)                                    |
| Vitamin BT (carnitine)        | UV (210 nm)<br>RI                              |
| Vitamin C (ascorbic acid)     | UV (245 nm)                                    |
| Vitamin H (biotin)            | UV (210 nm)                                    |
| Vitamin M (folic acid)        | UV (280 nm)                                    |
| Vitamin P (hesperidin)        | UV (265 nm)                                    |

| Fat-soluble Vitamins   |  |
|------------------------|--|
| Vitamin A (retinol)    | UV (325 nm)<br>RF (Ex. 340 nm, Em. 460 nm)     |
| Vitamin D              | UV (265 nm)                                    |
| Vitamin E (tocopherol) | UV (295 nm)<br>RF (Ex. 295 nm, Em. 325 nm)     |
| Vitamin K              | UV (250 nm)<br>RF (Post-column derivatization) |

\* The above wavelength values are approximate values. It is possible to be influenced by the state of mobile phase.

## Shim-pack XR Series

### ■ Shim-pack XR Series Columns Offer Versatility and Fast Analysis

Shim-pack XR Series columns use a 2.2  $\mu\text{m}$  packing particle size and offer a skillful balance between resolution efficiency and pressure. An XR Series column provides resolution equivalent to a general-purpose column with 5  $\mu\text{m}$  packing particle size (Shim-pack VP-ODS), but significantly reduces the analysis time. The pressure on the column under many analysis conditions does not exceed 35 MPa. Consequently, ultrafast analysis can be comfortably performed on an existing instrument.

|                                  | Shim-pack XR-ODS | Shim-pack XR-C8 | Shim-pack XR-Phenyl | Shim-pack XR-SIL |

### Shim-pack XR-ODS Permits Simple Switching from Conventional Analysis

The two chromatograms to the right show differences in analysis times when using different columns. The lower chromatogram is the result of analysis using a Shimadzu Shim-pack VP-ODS general-purpose column. The upper chromatogram is from analysis with a Shim-pack XR-ODS fast analysis column. As both Shim-pack VP-ODS and Shim-pack XR-ODS offer identical resolution properties, Shim-pack XR-ODS maintains the resolution while significantly reducing analysis times.

For more information of smooth transfer of methods from high-speed analysis to conventional analysis, please refer to page 14

### Shim-pack XR Series Comprehensive Product Range

In addition to the versatile Shim-pack XR-ODS that is bonded with the C18 group, the comprehensive Shim-pack XR Series product range includes the Shim-pack XR-C8 that is bonded with the C8 group to give different retention behavior to ODS, Shim-pack XR-Phenyl that is bonded with the phenylpropyl group, and the normal-phase Shim-pack XR-SIL silica column that achieves higher speeds.

# UHPLC/HPLC Columns

## Analysis Examples

### Analysis of Fat-Soluble Vitamins

The fat-soluble vitamins E (tocopherol) and A (retinol) were analyzed. The Shim-pack XR-C8 column achieves higher speed than a conventional C8 column.

| Conditions   |   |
|--------------|---|
| Column       | : Shim-pack XR-C8 (75 mmL. x 3.0 mmI.D., 2.2 μm)<br>(P/N: 228-59902-93) |
| Mobile Phase | : Methanol  |
| Flow Rate    | : 1.0 mL/min  |
| Col. Temp.   | : 40 °C   |
| Detection    | : UV 290 nm   |

### Analysis of Non-Steroidal Anti-Inflammatory Drug

The column was switched from Shim-pack XR-ODS to Shim-pack XR-Phenyl to improve the resolution.

The difference in retention properties between the ODS group and the phenylpropyl group improves the peak shape, controls the resolution, and reduces the analysis time.

| Conditions   |   |
|--------------|---|
| Column       | : Shim-pack XR-Phenyl (75 mmL. x 3.0 mmI.D., 2.2 μm)<br>(P/N: 228-59904-93)             |
| Mobile Phase | A) 20 mmol/L Phosphate buffer solution (pH 2.5)<br>B) Acetonitrile<br>A/B = 30/20 (v/v) |
| Flow Rate    | : 1.0 mL/min  |
| Col. Temp.   | : 40 °C   |
| Detection    | : UV 220 nm   |

### Fast Normal-Phase Analysis

Organic solvents are used as the mobile phase for normal-phase analysis. Due to environmental considerations, it is necessary to reduce the consumption of mobile phase compared with normal reversed-phase analysis. The Shim-pack XR-SIL silica column increases the speed of normal-phase analysis while reducing the consumption of mobile phase. In this example, the analysis time is reduced by 80 % while maintaining the flow rate, thereby reducing the overall mobile phase consumption to 20 % or less.

| Conditions   |  |
|--------------|--|
| Column       | : Shim-pack XR-SIL (75 mmL. x 3.0 mmI.D., 2.2 μm)<br>(P/N: 228-59906-92) |
| Mobile Phase | : Hexane / Ethanol = 90/10 (v/v)   |
| Flow Rate    | : 1.0 mL/min   |
| Col. Temp.   | : 40 °C  |
| Detection    | : UV 254 nm  |

## Shim-pack XR Series

### ■ Shim-pack XR Series, Shim-pack XR-ODS II and XR-ODS III High-Pressure Columns for Higher Resolution and Sensitivity

While the Shim-pack XR-ODS II and XR-ODS III use the same 2.2 µm packing particle size as the Shim-pack XR Series columns, they have higher 60 and 100 MPa pressure tolerance. This allows them to achieve high-resolution fast analysis in a long column using a water/methanol mobile phase. This column significantly extends the range of applications of high-resolution fast analysis to include analysis near room temperature. The Shim-pack XR-ODS II and XR-ODS III columns are ideal for the Nexera UHPLC or Prominence UFC. This combination achieves both faster speed and higher resolution.

|                                  | Shim-pack XR-ODS II  | Shim-pack XR-ODS III |           |

| USP Code                         | L1                   | L1                   | L1        |

Extensive product range, including 1.5 mmI.D. column to reduce mobile phase consumption

The Shim-pack XR-ODS II range includes a 1.5 mmI.D. model in addition to normal 2 mm and 3 mmI.D. columns. With an optimal flow rate of 0.2 to 0.3 mL/min, the 1.5 mmI.D. column offers the optimal flow rate for LC/MS and reduces mobile phase consumption.

Select a column to suit your purpose, whether shorter analysis times or high resolution

The Shim-pack XR-ODS III lineup features two columns: a short one utilizing a packing material with a particle size of 1.6 µm and a long one utilizing a 2.2 µm particle size, which is equivalent to the conventional XR column. This extensive lineup allows users to select a column according to analysis objectives, whether it's a short size to further shorten analysis times, or a long size to achieve high resolution while retaining the ease of use of the conventional XR column.

### ■ Strict Manufacturing Uniformity

Shim-pack VP series ensures high column-to-column performance reproducibility, which is ideal for method development and validation. Silica-bases, surface treatment and packing procedures are subjected to a strict array of quality criteria tests and controlled respectively. Each column is delivered together with Certificate of Compliance and Column Performance Report.

Comparison of reproducibility between three batches of silica-based materials

### ■ Balance of Column Efficiency and Column Backpressure

Shim-pack VP series achieves a higher column efficiency while maintaining low pressure. It provides superior performance shown by NTP (Number of Theoretical Plates) per 1MPa.

Column Size: 4.6 x 150 mm, Mobile Phase: Methanol/Water=70/30, Flow Rate: 1.0 mL/min., Sample: Naphthalene

# UHPLC/HPLC Columns

## ■ Excellent Peak Shape

Packing materials with less metal impurities achieve excellent peak shape of coordination compounds.

Completed end-capping achieves excellent peak shape of basic compounds.

## Shim-pack VP Series

### ■ Smooth Transfer of Methods from High-Speed Analysis to Conventional Analysis

By using the Shim-pack VP series of conventional columns in combination with the Shim-pack XR series of high-speed columns, which offer the equivalent separation performance, it is possible to perform method development via high-speed analysis, and then smoothly transfer to conventional analysis. Utilizing these columns with Nexera Method Scouting provides strong support for method development.

#### Example of High-Speed/Conventional Analysis Using Columns with Equivalent Retention Behavior

Examples of analysis with the Shim-pack VP and Shim-pack XR columns are shown below. In each example, analysis was achieved while maintaining essentially the same relative retention time. In method transfer, this equivalency is important, making the combination of the Shim-pack VP series and Shim-pack XR series optimal for method development.

#### Example of the Batch Analysis of 6 Sulfa Drugs

| Conditions   |  |  |
|--------------|--|--|
| Column       | : Top  | : Shim-pack VP-ODS (150 mmL. x 4.6 mmI.D., 5 µm)<br>(P/N: 228-34937-91)  |
|              | Bottom   | : Shim-pack XR-ODS (50 mmL. x 3.0 mmI.D., 2.2 µm)<br>(P/N: 228-41606-92) |
| Mobile Phase | : A) 0.1 % formic acid<br>B) Acetonitrile<br>A/B = 8/2 (v/v) |  |
| Flow Rate    | : Top  | : 1.0 mL/min   |
|              | Bottom   | : 1.0 mL/min   |

#### Relative Retention Times

| Peak                | Shim-pack VP-ODS | Shim-pack XR-ODS |
|---------------------|------------------|------------------|
| 1. Sulfadiamine     | 1.000            | 1.000            |

# UHPLC/HPLC Columns

## Shim-pack MAqC-ODS

Shim-pack MAqC-ODS I reversed-phase columns are packed with a silica gel containing metal and bonded octadecylsilyl group. In addition to the hydrophobic characteristics of the ODS, the metal content also provides cation-exchange effects. This increases the retention of basic compounds. Therefore, this allows use with only a buffer solution as the mobile phase for analyses that previously required using an ion pair reagent and enables using gradient elution. These characteristics are especially beneficial for analyzing water soluble vitamins and pharmaceuticals that contain a large amount of basic compounds.

### ■ Example of Simultaneous Analysis of Water Soluble Vitamins

Water soluble vitamins contain many highly polar basic components, which are known to exhibit weak retention in the reversed-phase mode. Consequently, with typical ODS columns, such as the Shim-pack VP-ODS, an ion pair reagent is added to the mobile phase for analysis. However, using an ion pair reagent makes gradient elution difficult, resulting in peak broadening for components that take longer to elute and making it difficult to improve sensitivity. In addition, the effort required to prepare the mobile phases and condition the column is also an issue. However, because the Shim-pack MAqC-ODS I enables using gradient elution, it can shorten analysis times and result in sharp peaks even for components that elute slowly. For example, riboflavin, which elutes as the final peak with a typical ODS column, is detected with approx. 2.3 times higher sensitivity by the Shim-pack MAqC-ODS I.

Shim-pack MAqC-ODS I

■ Conditions

|                |  |
|----------------|--|
| Column         | : Shim-pack MAqC-ODS I (150 mmL. × 4.6 mml.D., 5 µm)<br>(P/N: 228-59936-91)  |
| Mobile Phase   | : A) 10 mmol/L phosphate (Na) buffer solution (pH 2.6)<br>B) Acetonitrile<br>A/B = 99/1 - 2.5min - 99/1 - 7.5min - 50/50 - 0.01min -<br>99/1 - 5 min |

| Detection      | : UV 210 nm  |
| Injection Vol. | : 10 µL  |

### ■ Example of Analyzing Impurities in a Pharmaceutical

Many pharmaceuticals are basic compounds. The majority of impurities in pharmaceuticals, such as unreacted ingredients, by-products, and decomposition products, are highly polar basic substances. Consequently, analyzing impurity peaks using LC/MS can be difficult if a non-volatile ion pair reagent is contained. In the following example of analyzing famotidine, using a Co-Sense for LC/MS automatic pretreatment system to desalt the mobile phase used with the Shim-pack MAqC-ODS I column enabled analysis by LC/MS. While a typical ODS column (Shim-pack VP-ODS) detects 12 types of impurities, the Shim-pack MAqC-ODS I detects 20 types of impurities due to separation specificity and gradient elution.

# UHPLC/HPLC Columns

## ■ Example of Analyzing a Cold Remedy

Gradient elution with a Shim-pack MAQC-ODS I column was used for simultaneous analysis of components contained in an over-the-counter commercial cold remedy. The ability to use gradient elution enables the acquisition of sharp peaks, even for components that eluted slowly, similar to the water soluble vitamin and drug impurity examples on the prior page.

### Peaks

- 1. Thiamine
- 2. Acetaminophen
- 3. Caffeine
- 4. Chlorpheniramine
- 5. Ethenzamide
- 6. Isopropylantipyrine
- 7. Ibuprofen
- \*1 Nitric acid
- \*2 Maleic acid

#### ■ Conditions

|                |   |

## ■ Product Information

| Particle Size<br>( $\mu$ m) | I.D. (mm) | 2.0          | 4.6          |
|-----------------------------|-----------|--------------|--------------|
| Length (mm)                 |           |              |              |
| 5                           | 150       | 228-59936-94 | 228-59936-91 |

\* To use this column efficiently:

- 1) To increase the retention of basic compounds, please use a buffer solution within the pH 2 to 4 range.
- 2) In the case of a basic substance tailing, it may be possible to improve the peak shape by increasing the salt concentration of a buffer solution.
- 3) The elution of basic compounds is faster by increasing the salt concentration, and it is possible to adjust retention by salt concentration.

## Shim-pack GIST C18

### ■ Ultra High Inertness, High Durability

Shim-pack GIST C18 has superior inertness, which improves analysis precision and increases column durability. In addition, it can be used to analyze strong ionic compounds and difficult to absorb samples, which helps to obtain symmetrical peaks and high reproducibility.

Furthermore, because of the new silica gel, Shim-pack GIST C18 is suitable for wider pH (1-10) analysis at a consistent performance. This enables use of a silica-based column under alkaline conditions.

| Bonded Phase   | Octadecyl Groups      |
|----------------|-----------------------|
| Particle Size  | 2 µm, 3 µm, 5 µm      |
| Pore Size      | 10 nm                 |
| Surface Area   | 350 m <sup>2</sup> /g |
| Carbon Loading | 14 %                  |
| End-capping    | Yes                   |
| pH Range       | 1 to 10               |
| USP Code       | L1                    |

### Analysis Examples

| Conditions     |  |
|----------------|--|
| Column         | : Shim-pack GIST-HP C18 (150 mmL. × 3.0 mmI.D., 3 µm)<br>(P/N: 227-30040-05)   |
| Mobile Phase   | : A) 50 mM KH <sub>2</sub> PO <sub>4</sub> (pH 3.5, H <sub>3</sub> PO <sub>4</sub> )<br>B) Acetonitrile<br>A/B = 60/40 - 4 min - 40/60 |
| Flow Rate      | : 1.5 mL/min   |
| Col. Temp.     | : 40 °C  |
| Detection      | : UV 235 nm  |
| Injection Vol. | : 5.0 µL   |

| Conditions     |   |
|----------------|---|
| Column         | : Shim-pack GIST C18 (150 mmL. × 4.6 mmI.D., 5 µm)<br>(P/N: 227-30017-07)             |
| Mobile Phase   | : 0.1 mol/L Ammonium phosphate, 0.2 mol/L Sodium perchlorate buffer solution (pH 2.0) |
| Flow Rate      | : 1.0 mL/min  |
| Col. Temp.     | : 40 °C   |
| Detection      | : UV 260 nm   |
| Injection Vol. | : 1 µL  |

## Shim-pack GIST C18-AQ

### ■ Excellent Retentivity of Highly Polar Compounds

Shim-pack GIST C18-AQ achieves strong retention of hydrophilic highly polar compounds compared to general C18 columns, while maintaining high inertness and durability in highly or 100% aqueous mobile phases.

Shim-pack GIST C18-AQ is also able to reduce the absorption of basic and acidic compounds and achieve superior peak shapes in the analysis of metal complexes.

| Bonded Phase   | Octadecyl Groups      |
|----------------|-----------------------|
| Particle Size  | 1.9 µm, 3 µm, 5 µm    |
| Pore Size      | 10 nm                 |
| Surface Area   | 350 m <sup>2</sup> /g |
| Carbon Loading | 13 %                  |
| End-capping    | Yes                   |
| pH Range       | 1 to 10               |
| USP Code       | L1                    |

### Analysis Examples

#### Analysis of Polar Peptides

#### Analysis of Catechin

#### Conditions

**Column** : Shim-pack GIST C18-AQ (100 mmL. x 2.1 mmI.D., 1.9 µm) (P/N: 227-30807-02)  
**Mobile Phase** : A) 0.1 % Formic acid in Water  
B) Acetonitrile  
A/B = 100/0 - 0.2 min - 100/0 - 0.5 min - 15/85 - 1.5 min - 15/85 - 1.52 min - 100/0 - 2.5 min - 100/0 (v/v)  
**Flow Rate** : 0.8 mL/min  
**Col. Temp.** : 40 °C  
**Detection** : LC/MS/MS (LCMS-8030, ESI, Positive, SRM)  
**Injection Vol.** : 2 µL

#### Conditions

**Column** : Shim-pack GIST C18-AQ (150 mmL. x 4.6 mmI.D., 5 µm) (P/N: 227-30742-07)  
**Mobile Phase** : A) 0.1 % Formic acid in Water  
B) Acetonitrile  
A/B = 80/20 (v/v)  
**Flow Rate** : 1.0 mL/min  
**Col. Temp.** : 40 °C  
**Detection** : UV 280 nm

## Shim-pack GISS C18

### Ideal for Rapid Analysis

Shim-pack GISS C18 maintains the same ultra-high inertness and wider pH range as the Shim-pack GIIST C18, while providing rapid separations with symmetrical peaks.

The optimization of surface area, pore size and chemical bonding delivers superior peak shapes. It is ideal for LC/MS/MS analysis and enables MS-compatible buffers to be used due to extremely inert silica gel.

|                |                       |
|----------------|-----------------------|
| Bonded Phase   | Octadecyl Groups      |
| Particle Size  | 1.9 µm, 3 µm, 5 µm    |
| Pore Size      | 20 nm                 |
| Surface Area   | 200 m <sup>2</sup> /g |
| Carbon Loading | 9 %                   |
| End-capping    | Yes                   |
| pH Range       | 1 to 10               |
| USP Code       | L1                    |

### Analysis Examples

■ Peaks (100 µg/L each)  
Q1 > Q3

## Shim-pack GIS C18

### ■ High Retentivity, Lower Column Back Pressure

Widely used octadecyl bonded silica gel enables the Shim-pack GIS C18 to have strong hydrophobic interaction and low absorption of ionic compounds. In addition, highly uniform particles ensure stable mobile phase delivery and outstanding low pressure.

Shim-pack GIS C18 is ideal for preparative separations. Higher surface area silica and strong retentivity provide high preparative loading capacity without sacrificing peak shape.

| Bonded Phase   | Octadecyl Groups         |
|----------------|--------------------------|
| Particle Size  | 2µm, 3µm, 4µm, 5µm, 10µm |
| Pore Size      | 10 nm                    |
| Surface Area   | 450 m <sup>2</sup> /g    |
| Carbon Loading | 15%                      |
| End-capping    | Yes                      |
| pH Range       | 2 to 7.5                 |
| USP Code       | L1                       |

## Shim-pack GIS C18-P

### ■ High Steric Selectivity

Shim-pack GIS C18-P is designed with a polymerically bonded octadecyl group, which provides high steric selectivity for separation of planar and non-planar compounds. It achieves complete baseline separation of structurally similar compounds such as vitamin D2 and D3 because of the planarity recognition capability.

Shim-pack GIS C18-P is also ideal for the HPLC analysis of 16 PAH compounds listed as target pollutants by the U.S. EPA.

|                |                       |
|----------------|-----------------------|
| Bonded Phase   | Octadecyl Groups      |
| Particle Size  | 3 µm, 5 µm            |
| Pore Size      | 10 nm                 |
| Surface Area   | 450 m <sup>2</sup> /g |
| Carbon Loading | 29 %                  |
| End-capping    | -                     |
| pH Range       | 2 - 7.5               |
| USP Code       | L1                    |

### Analysis Examples

Due to increased retention of planar structural compounds, Shim-pack GIS C18-P shows different selectivity compared to Shim-pack GIS C18.

#### ■ Peaks

1. Phenanthro[3,4-c]phenanthrene (PhPh)

2. Tetrabenzonaphthalene (TBN)

3. Benzo[a]pyrene (BaP)

#### ■ Conditions

**Column** : 250 mmL. x 4.6 mmL.D., 5 µm  
**Mobile Phase** : A) Water  
                  B) Acetonitrile  
                  A/B = 15/85 (v/v)  
**Flow Rate** : 2.0 mL/min  
**Col. Temp.** : 30 °C  
**Detection** : UV 254 nm  
**Samples** : Standard Reference Material 869

#### ■ Peaks (100 µg/L each)

1. Vitamin D2 (Calciferol)

2. Vitamin D3 (Cholecalciferol)

#### ■ Conditions

**Column** : Shim-pack GIS C18-P (250 mmL. x 4.6 mmL.D., 5 µm)  
(P/N: 227-30557-07)  
**Mobile Phase** : Acetonitrile  
**Flow Rate** : 1.5 mL/min  
**Col. Temp.** : 40 °C  
**Detection** : UV 265 nm  
**Injection Vol.** : 200 µL

## Shim-pack GIS RP-Shield

### ■ Embedded with a Polar Functional Group

Shim-pack GIS RP-Shield contains a polar functional group embedded between silica surface and an octadecyl group, making it stable in 100% aqueous mobile phases without phase collapse. The embedded polar functional group is also extremely base deactivated, which enables the column to provide superior peak shape for acids.

Shim-pack GIS RP-Shield provides unique selectivity as hydrogen bonding interactions, making it suitable for separations that cannot be achieved by other modes, such as hydrophobic interactions or π-π interactions.

|                |                       |
|----------------|-----------------------|
| Bonded Phase   | Octadecyl Groups      |
| Particle Size  | 5 µm                  |

## Shim-pack GIST C8

### ■ Ultra-High Inertness, High Durability

Shim-pack GIST C8 is packed with high-purity porous spherical silica for delivering the same extreme inertness to elute either basic or acidic compounds without undesired adsorption. Low retentivity and no sample adsorption enable analysis of natural samples.

Shim-pack GIST C8 is the ideal choice for the rapid analysis of hydrophobic compounds.

### Analysis Examples

| Bonded Phase   | Octyl Group                     |
|----------------|---------------------------------|
| Particle Size  | 2 $\mu$ m, 3 $\mu$ m, 5 $\mu$ m |
| Pore Size      | 10 nm                           |
| Surface Area   | 350 m <sup>2</sup> /g           |
| Carbon Loading | 8 %                             |
| End-capping    | Yes                             |
| pH Range       | 1 to 10                         |
| USP Code       | L7                              |

#### ■ Conditions

**Column** : Shim-pack GIST C8 (150 mmL.  $\times$  4.6 mmI.D., 5  $\mu$ m)  
(P/N: 227-30137-07)

**Mobile Phase** : A) 10 mmol/L Disodium phosphate buffer solution (pH 8.0)  
B) Tetrahydrofuran  
A/B = 87/13, v/v

**Flow Rate** : 1.0 mL/min

**Col. Temp.** : 40 °C

**Detection** : UV 260 nm

**Injection Vol.** : 5  $\mu$ L

#### ■ Conditions

**Column** : Shim-pack GIST C8 (150 mmL.  $\times$  2.1 mmI.D., 3  $\mu$ m)  
(P/N: 227-30164-07)

**Mobile Phase** : 0.1 % Formic acid, 5 mmol/L Ammonium formate in Methanol

**Flow Rate** : 0.2 mL/min

**Col. Temp.** : 40 °C

**Detection** : LC/MS/MS (ESI, Negative, MRM)

**Injection Vol.** : 2  $\mu$ L

## Shim-pack GIST Phenyl

### ■ Extremely Strong π-π Interactions

The extremely unique phase characteristics of Shim-pack GIST Phenyl are critical to resolving compounds that could not be separated with a C18 or C8 phase column.

In addition to π-π interactions, Shim-pack GIST Phenyl provides hydrogen bonding secondary interactions, which results in retaining polar compounds at the same time. As the phenyl groups are directly bonded to the silica gel, Shim-pack GIST Phenyl is also capable of the analysis of structural isomers due to its high stereo-selectivity.

| Bonded Phase   | Phenyl Group          |
|----------------|-----------------------|
| Particle Size  | 2 µm, 3 µm, 5 µm      |
| Pore Size      | 10 nm                 |
| Surface Area   | 350 m <sup>2</sup> /g |
| Carbon Loading | 10 %                  |
| End-capping    | -                     |
| pH Range       | 2 to 7.5              |
| USP Code       | L11                   |

### Analysis Examples

#### ■ Peaks (0.1 mg/L each)

- 1. Hydrocortisone
- 2. Prednisolone

#### ■ Conditions

**Column** : Shim-pack GIST Phenyl (50 mmL. x 2.1 mmI.D., 2 µm)  
(P/N: 227-30207-02)

**Mobile Phase** : A) 0.05 % Formic acid in Water  
B) 0.05 % Formic acid in Methanol

A/B = 60/40, v/v

**Flow Rate** : 0.6 mL/min

**Col. Temp.** : 40 °C

**Detection** : LC/MS/MS (ESI, Positive, MRM)

**Injection Vol.** : 5 µL

# UHPLC/HPLC Columns

## Shim-pack GIST Phenyl-Hexyl

### ■ Alternative Selectivity to C18 Columns

Shim-pack GIST Phenyl-Hexyl columns are bonded with a phenyl ring together with a hexyl (C<sub>6</sub>) chain, which provides complementary selectivity to straight alkyl-chain columns due to its π-π interactions and hydrophobic interactions. Furthermore, Shim-pack GIST Phenyl-Hexyl maintains the same ultra-high inertness, wide pH range and high durability as the Shim-pack GIST C18, achieving stronger retention than other phenyl columns as well as reducing or eliminating adsorption of polar compounds.

| Bonded Phase   | Phenylhexyl Groups    |
|----------------|-----------------------|
| Particle Size  | 3 μm, 5 μm            |
| Pore Size      | 10 nm                 |
| Surface Area   | 350 m <sup>2</sup> /g |
| Carbon Loading | 9 %                   |
| End-capping    | Yes                   |
| pH Range       | 1 to 10               |
| USP Code       | L11                   |

### Analysis Examples

■ Conditions  
**Column** : 150 mmL. x 4.6 mmI.D., 5 μm  
**Mobile Phase** : A) Acetonitrile  
                  B) 25 mmol/L Monopotassium phosphate buffer solution (pH 3.0)  
**Flow Rate** : A/B=45/55 (v/v)  
**Col. Temp.** : 40 °C  
**Detection** : UV 230 nm

■ Conditions  
**Column** : 150 mmL. x 4.6 mmI.D., 5 μm  
**Mobile Phase** : A) Water  
                  B) Methanol  
                  A/B = 30/70 (v/v)  
**Flow Rate** : 1.0 mL/min  
**Col. Temp.** : 40 °C  
**Detection** : UV 254 nm

## Shim-pack GIS HILIC

### ■ Ideal for the Separation of Highly Polar Basic Compounds

Shim-pack GIS HILIC is designed for Hydrophilic Interaction Liquid Chromatography (HILIC). It is chemically bonded with a diol group, which provides excellent peak shape for basic and neutral polar compounds.

In addition, HILIC is a variation of normal phase mode. It is capable of using organic solvents mixed with water as mobile phase, while normal phase mode uses non-aqueous organic solvents. In HILIC, the higher the organic concentration in the solvents, the greater is the retention of highly polar compounds.

| Bonded Phase   | Diol Groups           |
|----------------|-----------------------|
| Particle Size  | 3 µm, 5 µm            |
| Pore Size      | 10 nm                 |
| Surface Area   | 450 m <sup>2</sup> /g |
| Carbon Loading | 20 %                  |
| End-capping    | -                     |
| pH Range       | 2 to 7.5              |
| USP Code       | L20                   |

### Analysis Examples

#### Analysis of Allantoin

#### ■ Peaks

- 1. Allantoin

#### ■ Conditions

**Column** : Shim-pack GIS HILIC (250 mmL. × 3.0 mmL.D., 5 µm)  
(P/N: 227-30639-07)  
**Mobile Phase** : A) 10 mmol/L Ammonium acetate  
B) Acetonitrile  
A/B = 5/95 (v/v)  
**Flow Rate** : 0.4 mL/min  
**Col. Temp.** : 40 °C  
**Detection** : UV 210 nm

#### Analysis of Taurine and Inositol

#### ■ Peaks (500 mg/L each)

- 1. Taurine
- 2. Inositol

#### ■ Conditions

**Column** : Shim-pack GIS HILIC (150 mmL. × 3.0 mmL.D., 5 µm)  
(P/N: 227-30639-06)  
**Mobile Phase** : A) Water  
B) Acetonitrile  
A/B = 20/80 (v/v)  
**Flow Rate** : 0.4 mL/min  
**Col. Temp.** : 40 °C  
**Detection** : RID (35 °C, positive)  
**Injection Vol.** : 20 µL

## Shim-pack GIST NH2

### ■ Ideal for Sugar Analysis

New high-purity porous spherical silica chemically bonded with the aminopropyl group ensures the superior stability of Shim-pack GIST NH2. It is capable of the analysis of vitamin E or simultaneous analysis of sugars that are hard to separate in reversed phase mode. In addition, due to being primarily amine-bound, Shim-pack GIST NH2 can analyze sugars with no separation of anomers, even under low-temperature conditions. Furthermore, Shim-pack GIST NH2 delivers highly reliable reproducibility and stability with accurate qualitative and quantitative results.

| Bonded Phase   | Aminopropyl Group     |
|----------------|-----------------------|
| Particle Size  | 3 µm, 5 µm            |
| Pore Size      | 10 nm                 |
| Surface Area   | 350 m <sup>2</sup> /g |
| Carbon Loading | 7 %                   |
| End-capping    | -                     |
| pH Range       | 2 to 7.5              |
| USP Code       | L8                    |

### Analysis Examples

■ Conditions  
**Column** : Shim-pack GIST NH2 (250 mmL. × 4.6 mmI.D., 5 µm)  
(P/N: 227-30302-08)  
**Mobile Phase** : A) Water  
B) Acetonitrile  
A/B = 25/75, v/v  
**Flow Rate** : 1.0 mL/min  
**Col. Temp.** : 40 °C  
**Detection** : RID  
**Injection Vol.** : 5 µL

# UHPLC/HPLC Columns

## Shim-pack GIS CN

### ■ Suitable in Either Reversed Phase or Normal Phase Mode

Shim-pack GIS CN is capable of either normal phase or reversed phase analysis. Cyanopropyl groups bonded to silica gel with high density increases the difference recognition of hydrophilicity and the stability. Due to no end-capping, it is capable of analysis utilizing cyano group characteristics.

In reversed phase mode, separation can be achieved for those compounds that could not be separated on straight-chain-alkyl columns, such as C18 or C8 bonded phases. When using the column for reversed phase mode, fully equilibrate the column before use.

| Bonded Phase   | Cyanopropyl Group     |
|----------------|-----------------------|
| Particle Size  | 3 µm, 5 µm            |
| Pore Size      | 10 nm                 |
| Surface Area   | 450 m <sup>2</sup> /g |
| Carbon Loading | 14 %                  |
| End-capping    | -                     |
| pH Range       | 2 to 7.5              |
| USP Code       | L10                   |

### Analysis Examples

■ Peaks  
1. gamma-oryzanol  
2. vanillin

■ Conditions  
**Column** : Shim-pack GIS CN (150 mmL. x 4.6 mmL.D, 5 µm)  
(P/N: 227-30263-06)  
**Mobile Phase** : A) Hexane  
B) 2-Propanol  
C) Acetic acid  
A/B/C = 94/5/1 (v/v/v)  
**Flow Rate** : 1.0 mL/min  
**Col. Temp.** : 30 °C  
**Detection** : UV 320 nm  
**Injection Vol.** : 1 µL

■ Peaks  
1. Asparagine • H<sub>2</sub>O (0.75 mg/mL)  
2. Aspartic acid (0.75 mg/mL)  
3. Fumaric acid (0.01 mg/mL)  
4. Maleic acid (0.01 mg/mL)

■ Conditions  
**Column** : Shim-pack GIS CN (250 mmL. x 4.6 mmL.D., 5 µm)  
(P/N: 227-30263-07)  
**Mobile Phase** : 20 mmol/L Monopotassium phosphate buffer solution (pH 4.0)  
**Flow Rate** : 1.0 mL/min  
**Col. Temp.** : 40 °C  
**Detection** : UV 210 nm  
**Injection Vol.** : 5 µL

## Shim-pack GWS C18

### Economical Choice

Shim-pack GWS C18 is packed with high-purity silica gel. A uniform pore size ensures low pressure, while complete end-capping makes it possible for analysis of acidic or basic compounds.

Shim-pack GWS series is an ideal choice for cost control.

| Bonded Phase   | Octadecyl Groups      |
|----------------|-----------------------|
| Particle Size  | 5 µm                  |
| Pore Size      | 10 nm                 |
| Surface Area   | 450 m <sup>2</sup> /g |
| Carbon Loading | 9.5 %                 |
| End-capping    | Yes                   |
| pH Range       | 2 to 7.5              |
| USP Code       | L1                    |

### Analysis Examples

#### Cold medication

Peaks (10 mg/L each)  
1. Potassium Guaiacol sulfonate  
2. Acetaminophen  
3. Caffeine  
4. Ethenzamide  
5. Allyl isopropyl acetyl urea  
6. Isopropylantipyrine  
7. Ibuprofen

#### Puerariae radix

Peaks  
1. Puerarin

#### Conditions

Column : Shim-pack GWS C18 (150 mmL. × 4.6 mmI.D., 5 µm)

(P/N: 227-30158-01)

Mobile Phase : A) 0.1 % Phosphoric acid in Water

B) Acetonitrile

A/B = 90/10 - 2 min - 90/10 - 10 min - 0/100

Flow Rate : 1.0 mL/min

Col. Temp. : 40 °C

Detection : UV 210 nm

Injection Vol. : 10 µL

#### Conditions

Column : Shim-pack GWS C18 (250 mmL. × 4.6 mmI.D., 5 µm)

(P/N: 227-30158-03)

Mobile Phase : A) Water

B) Acetonitrile

A/B = 89/11

Flow Rate : 1.0 mL/min

Col. Temp. : 20 °C

Detection : UV 250 nm

Injection Vol. : 10 µL

## Shim-pack Solar

### ■ Good hydrophobic retention, low absorption of ionic compounds

Shim-pack Solar C18 and C8 columns are packed with high purity silica gel or inertness. The silica gel has higher surface area and fully end-capped with good hydrophobic retention, low absorption of ionic compounds and good peak shapes. Highly uniform particles ensure stable mobile phase delivery and low pressure. The Shim-pack Solar LC columns have a wide pH range of 2 to 9, suitable for a wide range of method development.

# UHPLC/HPLC Columns

## Shim-pack FC-ODS

### ■ Shortens the Analysis Time Using a Conventional System

Shim-pack FC-ODS is an ideal column to shorten your analysis time using conventional HPLC. Its innovative surface structure and optimized packing method also enable outstanding resolution. Particle size is 3 µm, but the performance of a Shim-pack FC-ODS is equivalent to a 2 µm column while the resolution is twice as that of a 5 µm column. Therefore, Shim-pack FC-ODS can not only shorten analysis times, but also provide a higher number of theoretical plates.

|                    |                       |
|--------------------|-----------------------|
| Particle Size      | 3 µm                  |
| Pore Size          | 12 nm                 |
| Surface Area       | 315 m <sup>2</sup> /g |
| Carbon Loading     | 18%                   |
| Pressure Tolerance | 20 MPa / 2900 PSI     |
| Pore Volume        | 1 mL/g                |
| End-capping        | Yes                   |
| Bonding Type       | Monomeric             |
| pH Range           | 1.5 - 9               |
| USP Code           | L1                    |

### Analysis Examples

Shim-pack FC-ODS separates components by hydrophobic interaction like other ODS columns. It is possible to change to Shim-pack FC-ODS from other ODS columns under the same analytical conditions. On the other hand, hydrophilic interaction (hydrogen bond, coordination bond) has been restricted to a minimum, which ensures significant efficiency when analyzing basic compounds. In addition, Shim-pack FC-ODS has higher steric selectivity (capability to recognize the difference of steric structures), making it possible to separate some components that are difficult to retain in other ODS columns.

Shim-pack FC-ODS is available in three lengths to suit analysis objectives.

#### ■ 30mm

Recommended for use in high-throughput analysis of samples that do not have a complex matrix.

#### ■ 75mm

Recommended for shortening the analysis time to that of a 150 mm column. Because Shim-pack FC-ODS retains a similar number of theoretical plates as a 150 mm column, it is possible to obtain the same result within about half of the time without changing the conditions. (In the case of gradient analysis, it is necessary to change the concentration.)

#### ■ 150mm

Recommended for analyzing samples that are difficult to be retained in other 150 mm ODS columns.

### High-Throughput Analysis

| Conditions   |  |
|--------------|--|
| Column       | : Shim-pack FC-ODS (30 mmL. x 4.6 mmI.D., 3 µm)<br>(P/N: 228-40511-91) |
| Mobile Phase | : Water/Acetonitrile = 55/45 (v/v)                                     |
| Flow Rate    | : 3.0 mL/min (Column Pressure ca.8MPa)                                 |
| Col. Temp.   | : 50 °C  |
| Detection    | : 254 nm Response 1, AuxRNGx2  |
| Instrument   | : LC-2010+C-R8A  |

10 times repeated analysis in 6.5 minutes is possible.

## Shim-pack UC Series

### ■ Packed Columns for Supercritical Fluid Chromatograph

When conducting analysis with the Nexera UC supercritical fluid chromatography system, because diffusion of the sample band in the mobile phase is high compared with liquid chromatography, separation behavior changes significantly depending on the types of columns used. Shim-pack UC series was designed with a variety of stationary phases, making it suitable for analysis of various compounds.

Achieve high speed and high performance

Shim-pack UC series offers various stationary phases suitable for the mobile phase of high diffusion and low-viscosity liquid carbon dioxide. Analysis time can be reduced at a high flow rate without impairing the separation performance. In addition, analysis speed, which is limited in HPLC, can be increased.

Wide range of stationary phases meets diverse needs

Shim-pack UC series was designed with eight types of stationary phases and sizes to meet diverse research and development needs.

High durability and stable reproducibility

Shim-pack UC series achieves high inertness for improved analysis precision and increased column durability. Its uniform silica surface and stable chemical modification also ensure high analysis reproducibility.

# SFC Columns

## ■ Analysis Examples

### Tocopherol Isomers

Isomers and structurally similar compounds that are difficult to separate can be analyzed by Nexera UC and Shim-pack UC series at a high speed. In the example below, four kinds of tocopherol isomers were analyzed by Nexera UC and Shim-pack UC Sil. As shown below, analysis time was reduced to one-third the time analysis takes with a conventional HPLC method while resolution was improved.

Comparison of retention and resolution of tocopherol isomers between LC conditions and SFC ones

### Multiple Pesticides with a Wide Polarity Range

Simultaneous analysis of multiple pesticides with a wide polarity range from hydrophobic to hydrophilic has been achieved using the Nexera UC and Shim-pack UC RP. Shim-pack UC RP contains a polar functional group embedded between the silica surface and the C18 group. This allows the column to analyze a wide range of components from hydrophobic to hydrophilic ones.

Simultaneous analysis of multiple components can now be performed more efficiently using the Nexera UC and Shim-pack UC series.

| No. | Components          | log P |

### Phospholipid Classes

The example above shows the result of the analysis of phospholipid classes using Shim-pack UC Diol with Nexera UC. The ODS-based Shim-pack UC GIS II can also be used to analyze molecular species of phospholipids with the same modifiers. Nexera UC and Shim-pack UC series are ideal for analyzing complex samples.

## Nexera UC Columns

### Packed Columns for Supercritical Fluid Chromatograph

When conducting analysis with the Nexera UC supercritical fluid chromatography system, because diffusion of the sample band in the mobile phase is high compared with liquid chromatography, separation behavior changes significantly depending on the types of columns used. Shim-pack UC series was designed with a variety of stationary phases, making it suitable for analysis of various compounds.

#### ■ Features

##### ■ Achieve high speed and high performance

Shim-pack UC series offers various stationary phases suitable for the mobile phase of high diffusion and low-viscosity liquid carbon dioxide. Analysis time can be reduced at a high flow rate without impairing the separation performance. In addition, analysis speed, which is limited in HPLC, can be increased.

##### ■ Wide range of stationary phases meets diverse needs

Nexera UC series was designed with fourteen Achiral and ten Chiral types of stationary phases with a range of sizes to meet diverse research and development needs. Columns are available in Sub-2, 3, and 5 micron particle sizes.

##### ■ High durability and stable reproducibility

Nexera UC series achieves high inertness for improved analysis precision and increased column durability. Its uniform silica surface and stable chemical modification also ensure high analysis reproducibility.

## Nexera Method Scouting Kits

The high-speed performance of SFC can shorten the time required for method scouting. It automatically generates a large number of methods by utilizing combinations of up to 12 columns, four modifiers, and different ratios of modifiers to mobile phase. Shimadzu currently offers Nexera UC Scouting Kits for chiral and achiral compounds.

#### ■ Nexera UC Chiral Method Scouting Kit

The Nexera UC Chiral Scouting Kit includes one column each of the following stationary phases:

- |       |       |
|-------|-------|
| • CCA | • CCO |
| • CCJ | • CCS |
| • CC3 | • CC4 |

3.0mm X 150mm, 5 micron particle size

Part number: 220-91625-00

#### ■ Nexera UC SFC Method Scouting Kit

The Nexera UC SFC Scouting Kit includes one column each of the following stationary phases:

- |            |                  |
|------------|------------------|
| • Basic    | • Ethyl Pyridine |
| • PFP      | • Nitro          |
| • Naphthyl | • Diol           |

3.0mm X 100mm, 3 micron particle size

Part number: 220-91627-00

# Chiral Separation Columns

## ■ Nexera UC Chiral CCA Columns

The Nexera UC Chiral CCA column consists of a polysaccharide coated chiral stationary phase, tris-(3,5-di-methylphenyl) carbamoyl amylose, on high-purity silica gel. Similar in selectivity to ChiralPak® AD, Nexera UC Chiral CCA columns can be used for both HPLC and SFC applications.

## ■ Nexera UC Chiral CCC Columns

The Nexera UC Chiral CCC column consists of a modified cellulose, including the combination of 3-chloro-4-methylphenylcarbamate and 3,5-dichlorophenylcarbamate bonding groups coated on high-purity, high-performance spherical silica particles. The combination of bonded groups stabilizes the solubility of coated phase making for a durable phase similar to other widely used coated phases. The use of cellulose modified with chlorinated phenyl groups provides for separation of many previously unresolved/poorly resolved chiral mixtures.

## ■ Nexera UC Chiral CCJ Columns

The Nexera UC Chiral CCJ (cellulose 4-methylbenzoate) is a robust column for high-resolution chiral separations based on a halogenated carbohydrate based chiral stationary phase and is similar in selectivity to ChiralPak® OJ-H.

## ■ Nexera UC Chiral CCO Columns

The Nexera UC CCO column is a polysaccharide-coated chiral stationary phase produced by a unique process of coating the proven chiral selector, tris-(3,5-di-methylphenyl) carbamoyl cellulose onto high-purity, high-performance silica. Nexera UC CCO columns are similar in selectivity to ChiralPak® OD and can be used for both HPLC and SFC applications.

## ■ Nexera UC Chiral CCO F2 Columns

The Nexera UC Chiral CCO F2 incorporates a fluoro group in its phenyl carbamate cellulose structure, which is useful in promoting fluorophilic retention mechanisms. Fluorophilic retention can be particularly useful in medicinal chemistry and drug discovery where more than a third of newly approved small molecule drugs contain fluorine. The Nexera UC Chiral CCO F2 columns are similar to CCO F4 but with a 2-fluoro 5-methylphenyl cellulose structure that can be used for SFC or HPLC.

## ■ Nexera UC Chiral CCO F4 Columns

The Nexera UC Chiral CCO F4 incorporates a fluoro group in its phenyl carbamate cellulose structure, which is useful in promoting fluorophilic retention mechanisms. Fluorophilic retention can be particularly useful in medicinal chemistry and drug discovery where more than a third of newly approved small molecule drugs contain fluorine. The Nexera UC Chiral CCO F4 columns are similar to CCO F2 but with a 4-fluoro 3-methylphenyl cellulose structure that can be used for SFC or HPLC.

## ■ Nexera UC Chiral CCS Columns

The Nexera UC Chiral CCS (amylose tris [(S)- $\alpha$ -methylbenzylcarbamate]) permits the enantiomeric separation of 1-Indanol and other similar compounds without the addition of DEA (diethyl amine) as in traditional methods. The Nexera UC Chiral CCS columns are similar in selectivity to ChiralPak® AS-H.

## ■ Nexera UC Chiral CC2 Columns

The Nexera UC Chiral CC2 is a modified cellulose with 3-chloro-4 methylphenyl-carbamate bonding groups coated on high-purity, high-performance spherical silica particles. The Nexera UC Chiral CC2 columns are similar to Phenomenex Lux Cellulose-2.

## ■ Nexera UC Chiral CC3 Columns

The Nexera UC Chiral CC3 (amylose tris(5-chloro-2-methyl- phenylcarbamate) is ideal for high-resolution chiral separations based on a new halogenated carbohydrate-based chiral stationary phase. The Nexera UC Chiral CC3 columns are similar in selectivity to ChiralPak® AY-H.

## ■ Nexera UC Chiral CC4 Columns

The Nexera UC Chiral CC4 is a modified cellulose coated on high-purity, high-performance spherical silica particles. The chemical modification includes the chemical bonding of 4-chloro-3 methylphenylcarbamate to cellulose. The use of cellulose modified with chlorinated phenyl groups provides a separation opportunity for many previously unresolved and poorly resolved chiral mixtures. The Nexera UC Chiral CC4 columns are similar in selectivity to ChiralPak® OZ-H.

| Column               | Particle Size (um) | Length (mm) | Inner Diameter (mm) |              |              |
|----------------------|--------------------|-------------|---------------------|--------------|--------------|
|                      |                    |             | 2.1                 | 3            | 4.6          |
| Nexera UC Chiral CCA | 3                  | 50          | 220-91625-01        | 220-91625-02 | 220-91625-03 |

# Achiral Separation Columns

## ■ **Nexera UC Amino**

Nexera UC Amine columns contain a high-density NH<sub>2</sub> bonded material specifically designed for SFC analysis requiring higher sample loading.

## ■ **Nexera UC Amino Phenyl**

Nexera UC Amino Phenyl columns are a specialty SFC stationary phase that has proven superiority to conventional stationary phases in the areas of separation selectivity and loading capacity which was designed for the separation of amines, alcohols and acids by SFC without the use of additives. Nexera UC Amino Phenyl columns work well under normal phase mixed mode conditions, offering π-π interactions and good base deactivation.

## ■ **Nexera UC Basic**

Nexera UC Basic columns exhibit a highly basic character and are ideally suited to performance/high-speed SFC chromatography applications of chemicals containing amine groups.

## ■ **Nexera UC Cyano**

Nexera UC Cyano columns are a high-surface area cyano stationary phase designed for SFC analysis and allow for higher sample loading.

## ■ **Nexera UC DEAP**

Nexera UC DEAP (diethylaminopropyl) columns allow for separation of compounds that would normally require the addition of an amine modifying agent to the mobile phase. Nexera UC DEAP columns are ideal for chemicals containing strong amine groups and provide flexibility to the SFC chromatographer with mobile phase composition and fraction collection greatly simplified without the use of amino additives.

## ■ **Nexera UC Diol**

Nexera UC Diol columns are a specialty phase designed for SFC with high-density diol surface coverage, ensuring better and more reproducible separations compared to conventional unbonded silica. Nexera UC Diol columns are particularly suitable for acidic and basic analytes.

## ■ **Nexera UC Ethyl Pyridine**

Nexera UC Ethyl Pyridine columns are ideal for chemicals that are functionalized with strong amine groups and provide flexibility for the SFC chromatographer with mobile phase composition and fraction collection greatly simplified without the use of amino additives.

## ■ **Nexera UC Ethyl Pyridine II**

Nexera UC Ethyl Pyridine II columns are ideally suited for the retention and rapid separation of chemicals containing acidic groups.

## ■ **Nexera UC 4-Ethyl Pyridine**

Nexera UC 4-Ethyl Pyridine columns are an alternative to, and provide, different selectivity to Nexera UC Ethyl Pyridine (2-ethyl pyridine) columns.

## ■ **Nexera UC HILIC**

Nexera UC HILIC columns are composed of a polyhydroxylated polymer that is coated and bound to silica. This composition provides hydroxyl levels that are well above conventional silica and diol type stationary phases, permitting higher sample loading.

## ■ **Nexera UC Naphthyl**

Nexera UC Naphthyl columns contain a naphthalene-based SFC material with high bonding density and intrinsic base deactivation due to a rigid structure that also enables the shape selectivity needed for many of the diastereomeric separations. Nexera UC naphthyl columns exhibit strong π-π interactions and charge transfer properties and perform well for diastereomer separations as well as non-polar compounds. Selectivity of this column is between graphitized carbon and alkyl-type stationary phases.

## ■ **Nexera UC Nitro**

Nexera UC Nitro columns are specifically designed for the separation of geometrical isomers as well as diastereomers. They are the columns of choice in separating compounds containing double bonds, aromatic groups, polarizable electrons and conjugated systems and exhibit a strong charge transfer system.

## ■ **Nexera UC PFP**

Nexera UC PFP (pentafluorophenyl) columns are specifically designed for the separation of geometrical isomers as well as diastereomers. They are the columns of choice in separating compounds containing aromatic groups, polarizable electrons and conjugated systems as well as halogenated compounds.

# Achiral Separation Columns

## Nexera UC Pyridyl Amide

Nexera UC Pyridyl Amide columns allow for separation of compounds that would normally require the addition of TFA or an amine modifying agent to the mobile phase. Nexera UC Pyridyl Amide columns are ideal for chemicals that contain both basic and acidic groups and provide flexibility to the SFC chromatographer with mobile phase composition and fraction collection greatly simplified without the use of amino additives.

## Nexera UC Silica

Nexera UC Silica columns are a metal-free, ultra-high-purity stationary phase that is pressure stable and specifically engineered for high-performance SFC applications. The surface is treated to produce optimum SFC separation interactions and loading capacity while maintaining superior peak shape performance for many chemicals.

# Size Exclusion Columns

## Shim-pack GPC Series

Shim-pack GPC series columns are used for the determination of tetrahydrofuran (800 Series), chloroform (800C Series), and dimethylformamide (800D series).

The technique of GPC does not utilize such chemical reactions as partition, adsorption, and ion exchange, but a physical reaction consisting of a separation based on molecular size of the sample components. Therefore, this method is suitable for the measurement of molecular weight distribution of high polymers and oligomers.

Shim-pack GPC series are packed with polystyrene polymers with respective degrees of cross-linking in order to meet exact analysis requirements, ranging from analysis of high polymers to that of oligomers. GPC-80M (80MC, 80MD) are mixed gel columns.

### Determination of Tetrahydrofuran

#### Analytical Columns

| Column             | Exclusion Limit<br>(polystyrene) | Dimensions<br>(Length × I.D., mm) | P/N          |
|--------------------|----------------------------------|-----------------------------------|--------------|
| Shim-pack GPC-801  | $1.5 \times 10^3$                | 300 × 8.0                         | 228-20803-91 |

## Shim-pack Diol Series

Shim-pack Diol series is a kind of gel filtration chromatography (GFC) column. GFC is used to separate water-soluble high polymers such as polysaccharides, proteins, and nucleic acids according to their molecular sizes by using hydrophilic packing materials and aqueous mobile phase.

Shim-pack Diol series is packed with porous spherical silica gel chemically bonded with a hydroxyl group. Due to the hydrophilic hydroxyl group, Shim-pack Diol series can be used in high-speed GFC and provide sharp peaks during the analysis of protein and biochemicals (such as enzymes).

### ■ Product Information

| Column             | Stationary Phase | Particle Size ( $\mu\text{m}$ ) | Dimensions (Length $\times$ I.D., mm) | P/N          |

# Ion Chromatography Columns

## Shim-pack IC Series

Ion chromatography (IC) is used for analysis of inorganic and organic ions. It is categorized as suppressor IC and non-suppressor IC. Non-suppressor IC is composed of a conventional HPLC system combined with a conductivity detector, while suppressor IC requires an extra suppressor.

# Ion Chromatography Columns

## ■ Analysis Examples

### Examples of Cation Analysis

Shim-pack IC-C4 is a cation analysis column for non-suppressor IC. Because the pH of the mobile phase can be changed by selecting a different combination of acid and base in eluent, non-suppressor IC enables various kinds of analysis.

#### High Resolution of Na<sup>+</sup> and NH<sub>4</sub><sup>+</sup>

High resolution of Na<sup>+</sup> and NH<sub>4</sub><sup>+</sup> has been achieved by improving the peak shape of Na<sup>+</sup>. The influence on the peak shape of NH<sub>4</sub><sup>+</sup> from a high concentration of Na<sup>+</sup> has been reduced, making it possible to analyze tap water of normal concentration under standard mobile phase conditions. The resolution can be further improved by using a mobile phase treated with 18-crown-6 additive.

| Conditions     |   |
|----------------|---|
| Column         | : Shim-pack IC-C4 (150 mmL × 4.6 mmI.D., 7 µm)<br>(P/N: 228-41616-91) |
| Mobile Phase   | : 2.5 mmol/L oxalic acid  |
| Flow Rate      | : 1.0 mL/min  |
| Col. Temp.     | : 40 °C   |
| Detection      | : CDD   |
| Injection Vol. | : 50 µL   |

Analyses of a Standard Mixture of 5 Cations

#### Flexible Mobile Phase Selection

Due to the features of non-suppressor IC, flexible mobile phase composition can be used. Besides normal inorganic cations, Shim-pack IC-C4 is capable of analyzing transition metals by using a mixed mobile phase.

| Conditions     |  |
|----------------|--|
| Column         | : Shim-pack IC-C4 (150 mmL × 4.6 mmI.D., 7 µm)<br>(P/N: 228-41616-91)                  |
| Mobile Phase   | : A) 2.5 mmol/L oxalic acid<br>B) 2.5 mmol/L methanesulfonic acid<br>A/B = 60/40 (v/v) |
| Flow Rate      | : 1.0 mL/min   |
| Col. Temp.     | : 40 °C  |
| Detection      | : CDD  |
| Injection Vol. | : 50 µL  |

# Ion Chromatography Columns

## Shim-pack IC Series

### ■ Analysis of Anions in Water

Shim-pack IC-SA2 was developed for anion analysis with a Shimadzu Ion Chromatograph HIC-SP (suppressor type). It is capable of analyzing fluoride ions, chloride ions, nitrite ions, bromide ions, nitrate ions, phosphate ions, sulfate ions, etc., making it possible to be used in both tap water and environmental water analysis.

### Analysis Examples

Analysis of Standard Anion Samples

Analysis of Tap Water

| ■ Conditions   |   |

### High-Resolution Determination of the Components in Water-Quality Analysis

Environmental water and mineral water usually contain silicate. In this kind of analysis, although the water sample contains a large amount of silicic acid, fluoride ions can still be separated and determined with high resolution (same mobile phase as above was used).

## Analysis of Sugar and Organic Acid

### ■ Shim-pack SCR Series

Shim-pack SCR-101N/C/P are suitable for the analysis of monosaccharides. Since the samples are separated under a mixed mode of gel filtration and ligand exchange, the selectivity differs depending on the type of cation.

Shim-pack SCR-101H and SCR-102H are ion exclusion chromatography columns, using H type sulfonated styrene polymer as stationary phase. They are ideal for analysis of organic acids using an acid aqueous solution (e.g. aqueous solution of perchloric acid) as mobile phase.

■ Conditions

Column : Shim-pack SCR-101C (300 mmL × 7.9 mmI.D., 10 µm) (P/N: 228-17889-91)  
Mobile Phase : Water  
Flow Rate : 1.0 mL/min  
Col. Temp. : 80 °C  
Detection : RID

Analysis of Saccharide Standard

■ Conditions

Column : Shim-pack SCR-102H (2 columns in series) (P/N: 228-17893-91)  
Mobile Phase : 5 mM p-Toluene sulfonic acids aqueous solution  
Flow Rate : 0.8 mL/min  
Col. Temp. : 40 °C  
Detection : CDD (pH buffer organic acids analysis system)

Analysis of Organic Acids

## ■ Shim-pack ISA/ISC Series

Shim-pack ISA/ISC series uses polystyrene gel as solid support, making it possible to utilize both electrostatic reaction and hydrophobic reaction. They are suitable for the analysis of sugars (ISA) and guanidino compounds (ISC-05).

# Dedicated Columns

## Analysis of Nucleotides, Oligonucleotides and Protein

### ■ Shim-pack WAX/WCX Series

Shim-pack WAX/WCX series columns are chemically-bonded hydrophilic silica gel based ion exchange columns. Shim-pack WAX-1 is ideal for analysis of nucleotides and oligonucleotides while Shim-pack WAX-2 and WCX-1 is ideal for analysis of proteins.

Analysis of Mononucleotides

\* Installed between the liquid pump and the sample injector to protect the column.

# Pretreatment Columns

## Shim-pack MAYI Series

Due to optimized particle size and a newly developed coating technology, the MAYI series online pretreatment column is highly effective in deproteinization and offers long-term stability. It provides excellent reproducibility even for continuous analysis of multiple analytes.

### ■ How the Shim-pack MAYI Series Works

The outer surfaces of silica gel (50 µm) are coated with a hydrophilic polymer, so that only the interior of pores are chemically modified by octadecyl radicals (ODS). Since proteins and other macromolecules cannot enter the pores and are blocked by the hydrophilic polymer on the outer surfaces, they are quickly eluted without being retained by the ODS solid phase. In contrast, pharmaceuticals and other induced low molecular weight compounds penetrate the pores and are retained by the inner surfaces of the stationary phase.

### ■ Quick and Reliable Protein Removal

The newly developed hydrophilic polymer coating technology quickly and reliably removes macromolecules, such as protein, from injected biological samples to achieve high recovery rates for target components. In addition to securely protecting analytical columns and LC/MS interfaces, this also helps reduce the time required for finishing the analysis.

### ■ Outstanding Durability

Due to the polymer coating technology and particle size optimization, stable data can be obtained for long periods. The figure below shows results from 300 consecutive injections of 100 µL of blood plasma. No decrease in the deproteinization rate or degradation of peak shape was observed.

Comparison of 1st and 300th Analyses

#### ■ Conditions

|                |  |
|----------------|--|
| Samples        | : Isopropylantipyrine added Blood plasma<br>Sample solution: 0.1% phosphoric acid and acetonitrile mixture (95:5)<br>Dilution: 8 times |
| Detection      | : Analysis: 275 nm, Blood plasma matrix: 280 nm  |
| Injection Vol. | : 100 µL   |

# Pretreatment Columns

## ■ Stable Trap Even for Large Injection Volumes

The Shim-pack MAYI-ODS column provides stable component recovery rates and protein removal, even when injecting large volumes. Even when 500 µL of blood plasma was directly injected, a high recovery rate was obtained and no peak distortion was observed.

### ■ Conditions

**Samples** : Indomethacin added Blood plasma  
Sample solution: 0.1% phosphoric acid and acetonitrile mixture (95:5)  
Dilution: 8 times

**Detection** : UV 315 nm

## ■ Product Information

| Column                | Stationary Phase        | Separation Mode                                |
|-----------------------|-------------------------|--|
| Shim-pack MAYI-ODS(G) | Octadecyl group         | Strongest retentivity in reversed phase mode   |
| Shim-pack MAYI-C14(G) | Tetradecyl group        | Retentivity next to ODS in reversed phase mode |

# Pretreatment Columns

## Shim-pack SPC Series

Shim-pack SPC series is specifically developed for online sample preparation systems that utilize a column switching method.

Shim-pack SPC-RP column is packed with polymer particles and used for reversed phase LC.

Shim-pack SPC-AE1 column is packed with fully porous silica gel particles on which weakly basic anion exchange functions are chemically bonded.

### ■ Product Information

# Preparative Columns

## Shim-pack PREP Series

### ■ Shim-pack PREP Series

Shim-pack PREP series is packed with fully porous spherical silica particles on which respective stationary phases are chemically bonded. (Except the PREP-SIL which is packed with silica particles without any surface treatment.)

The residual silanol groups are end-capped by the unique silylation method (except the PREP-SIL).

| Column             | Particle Size<br>( $\mu\text{m}$ ) | I.D. (mm)<br>Length (mm) | 20           | 30           | Guard Column |              |

\* Length of guard columns for 50 mm I.D. preparative columns is 75 mm.

# NexLeaf™ Columns

## Separating the Impossible

NexLeaf™, a superficially porous series of HPLC columns engineered to achieve the ultimate in resolution and sensitivity in the most challenging cannabis matrix. Each NexLeaf™ column has both analytical and guard columns available.

### ■ **NexLeaf™ for Pesticides**

Provides the ultimate separation for all of your multi-residue pesticide analysis needs.

### ■ **NexLeaf™ CBX™ for Potency**

Designed for the best separations of cannabinoids allowing for accurate potency determination of each analyte.

| Part Number  | Description   |
|--------------|---|
| 220-91525-70 | Column, LC, NexLeaf CBX for Potency, 2.7um, 4.6 X 150mm           |
| 220-91525-71 | Column, LC, NexLeaf CBX for Potency, 2.7um, 2.1 X 100mm           |
| 220-91525-72 | Column, LC, NexLeaf CBX for Potency, 2.7um, Guard Cartridge, 3/pk |
| 220-91525-73 | Column, LC, NexLeaf Guard Column Cartridge Holder                 |
| 220-91525-74 | Column, LC, NexLeaf for Pesticides, 2.7um, 2.1 X 150mm            |

# Mobile Phase Cleaner for UHPLC/HPLC

## Ghost Trap DS/DS-HP

A new high-pressure model for the elimination of impurities from organic solvents has been added to the Ghost Trap DS\* lineup. The Ghost Trap DS was co-developed with Daiichi Sankyo Co., Ltd. It has been designed to effectively adsorb impurities in the mobile phase in order to reduce the time required for method development and impurity analysis.

The 100 MPa pressure tolerance of the Ghost Trap DS-HP allows it to be used with UHPLC systems. This permits the effective use of the Ghost Trap DS for method development by UHPLC and subsequent transfer to conventional analysis.

\* DS: Abbreviation of Daiichi Sankyo (D) and Shimadzu (S)

### ■ Consistently Traps Impurities, Even in Organic Solvents

A major feature of the Ghost Trap DS is the ability to remove impurities, even in organic solvents. When the Ghost Trap DS is installed between the gradient mixer and autosampler in reversed phase gradient analysis, it can trap impurities from the piping and gradient mixer in addition to those from the mobile phase. The example on the right shows that it can effectively trap impurities in mobile phase when the Ghost Trap DS is installed just downstream of the gradient mixer.

Example of removing ghost peaks by Ghost Trap DS  
(The data is provided by Daiichi Sankyo Co., Ltd.)

|              |   |
|--------------|---|
| Column       | : ODS column  |
| Mobile Phase | : A) 25 mmol/L Phosphate (Potassium) buffer solution (pH 4.0) / Acetonitrile = 9/1<br>B) Water/Acetonitrile = 1/9 |
| Flow Rate    | : 0.65 mL/min   |
| Col. Temp.   | : 45 °C   |
| Detection    | : UV 210 nm   |

### ■ Product Information

| Item             | P/N          | Description               | Dimensions           | Internal Volume *1 | Pressure Tolerance |  |
|------------------|--------------|---------------------------|----------------------|--------------------|--------------------|--|
| Ghost Trap DS    | 228-59921-91 | Cartridge (2pcs)          | 30 mmL. × 7.6 mmI.D. | Approx. 700 µL     | 5000 psi           |  |
|                  | 228-59921-92 | Cartridge (2pcs) + Holder |                      |                    |                    |  |
|                  | 228-59921-93 | Cartridge (2pcs)          | 4.0 mmI.D. × 20 mmL. | Approx. 150 µL     |                    |  |
|                  | 228-59921-94 | Cartridge (2pcs) + Holder |                      |                    |                    |  |
| Ghost Trap DS-HP | 228-59931-91 | Packed type               | 2.1 mmI.D. × 30 mmL. | Approx. 60 µL      | 14500 psi          |  |

\*1 Note that a delay volume equivalent to the internal volume of the product occurs if the product is installed downstream of the gradient mixer or the confluence of two pumps.

\* The product service life differs according to analysis conditions, such as the mobile phase used.

\* In analysis using an ion-pairing reagent, the ion-pairing reagent may be retained in the product, influencing the retention time and peak shape.

\* Before connecting the analytical column, be sure to thoroughly clean the flow path with mobile phase (close to the final concentration for gradient analysis).

\* Note that some impurities may not be removed.

\* When performing high-pressure analysis exceeding 35 MPa with a UHPLC system, connect the gradient mixer to the Ghost Trap DS-HP with a pipe for UHPLC (e.g.228-53137-97).

# Vials

## Shimadzu LabTotal Vial MS Certified Kit

- Reduces the Adsorption of Basic Compounds on the Surface of the Glass Vial.
  - This improves quantitative accuracy in the analysis of trace basic compounds.
- Quality certificate proving suitability to LCMS / GCMS
  - This product can be used as a vial for high-sensitivity analysis in GCMS and LCMS
- Wide Mouth with Preset Cap and Septum Improves Ease of Use
  - This shortens the time needed for sample preparation and reduces human error.

| Part number  | Description  |
|--------------|--|
| 227-34001-01 | LabTotal Vial Certified Kit for LCMS, 100/pk                         |
| 227-34001-02 | Blue PP cap, Silicone white/PTFE red for LabTotal vial LCMS, 50/pk   |
| 226-84340-01 | Black PP cap, Silicone white/PTFE red for LabTotal vial LCMS, 100/pk |
| 227-34002-01 | LabTotal Vial Certified Kit for GCMS, 100/pk                         |

### ■ Mass Spec Quality Certificate Provided

This confirms that there was an absence of elution components from the vial in random inspections using LC/MS and GC/MS. Therefore, this product can be used with confidence, with no concern for ghost peaks originating from the vial.

# Dedicated Pretreatment Vials for CLAM-2000

CLAM-2000 is compatible with dedicated disposable pretreatment vials from Shimadzu. Filtration and Collection vials are used as a pair.

# Solvent Kits

## Solvent Bottles and Caps

### ■ Features

- Minimize release of solvent odors
- One-way emission control valve allows air to enter the reservoir as solvent is removed
- Valve opens at a low 0.07psi to minimize back pressure

| Item | Part number  | Description                               | Consists of   |
|------|--------------|---|---|
| ①    | 220-91411-00 | 1 L Bottle Cap Assy                       | For standard 1L Pyrex or Schott type bottles with GL-45 threads. Includes 1 solid plug and 1 filter plug with stainless steel frit. Filter plug included for use with He sparge.    |
| ②    | 220-91412-00 | 4 L Bottle Cap.                           | For standard 4L solvent bottles with GL-38 threads. Includes 1 solid plug and 1 filter plug with stainless steel frit. Filter plug included for use with He sparge.                 |
| ③    | 220-91413-01 | 1L Bottle/Cap PKG                         | Set of (5) 1-L solvent bottles and (5) 3-hole caps. Caps include a solid plug and a filter plug with a stainless steel frit. Filter plug included with caps for use with He sparge. |
| ④    | 228-38583-91 | HPLC Reservoir Tray Bottles, 1L, Set of 5 | Set of (5) 1-L solvent bottles  |

## LC/LCMS Solvent Waste Kits

### ■ Features

- Enclose your LC solvents in the reagent bottles and trap solvent vapours in the waste container
- Collect solvent waste and reduce solvent emissions from HPLC and other laboratory instruments
- Convert an open, venting waste collection point to a "Closed System"
- Can be used with a broad array of standard laboratory solvent container
- Designed for ease of use and adaptability

UNEXPOSED      EXPOSED      OVER EXPOSED

A color marker label at the top of the indicator tube, marked "EXPOSED," shows the color at which the indicator has been fully exposed. When the color approximates this label, the filter should be changed. If the indicator changes to a light yellow color, it designates a prolonged exposure to solvent and should be replaced immediately.

|   | Part number  | Description   | Consists of   |
|---|--------------|---|---|
| ① | 220-91494-01 | HPLC Startup Kit #1 W/2-GA Poly Waste Can                       | Complete installation kit for HPLC that includes a solvent reservoir tray, set of 5 1-L bottles with 3-hole caps, PEEK tubing and fittings kit, and a 2-gallon (8L) PE waste can with polypropylene quick-disconnect manifold fittings.   |
| ① | 220-91494-02 | HPLC Startup Kit #2 W/5-GAL Poly Waste Can                      | Complete installation kit for HPLC that includes a solvent reservoir tray, set of 5 1-L bottles with 3-hole caps, PEEK tubing and fittings kit, and a 5-gallon (20 L) PE waste can with polypropylene quick-disconnect manifold fittings.   |
| ① | 220-91494-03 | HPLC Startup Kit #3 W/ 2-GAL SS Waste Can For Normal Phase HPLC | Complete installation kit for HPLC that includes a solvent reservoir tray, set of 5 1-L bottles with 3-hole caps, tubing and fittings kit, and a 2-gallon (8L) PE waste can with stainless steel quick-disconnect manifold fittings. This type of waste can is REQUIRED for normal phase solvents.  |
| ① | 220-91494-04 | HPLC Startup Kit #4 W/ 5-GAL SS Waste Can For Normal Phase HPLC | Complete installation kit for HPLC that includes a solvent reservoir tray, set of 5 1-L bottles with 3-hole caps, tubing and fittings kit, and a 5-gallon (20L) PE waste can with stainless steel quick-disconnect manifold fittings. This type of waste can is REQUIRED for normal phase solvents. |
| ② | 220-91447-00 | Vapor Filter for waste can                                      | One filter  |
| ③ | 220-91440-30 | Plastic Jug, 3.7L for LCMS Spray Chamber Waste                  | One 3.7L plastic jug  |

## Fittings

### ■ Ultrashield UHPLC/HPLC Pre-column Filter

Stainless steel filter with a 0.5um frit that protects UFC columns while maintaining excellent column performance. Easily installs on any column and is leak tight to 15,000 psi (1034 bar).

Recommended for Premier, Premier II, XR-ODS, XR-ODS II and XR-ODS III columns.

Frit Dimensions : 0.062" dia.  
Frit Material : 316 Stainless Steel  
Frit Porosity : 0.5 micron  
Inlet/Outlet : Female/Male 10-32

| Part number  | Description                              | Pack Size |
|--------------|--|-----------|
| 220-91539-01 | Ultrashield UHPLC/HPLC Pre-Column Filter | 1         |
| 220-91539-03 | Ultrashield UHPLC/HPLC Pre-Column Filter | 3         |
| 220-91539-10 | Ultrashield UHPLC/HPLC Pre-Column Filter | 10        |

# Fittings

## Fittings for HPLC and UHPLC

These innovative fittings solve all of the difficulties of cumbersome LC plumbing issues. Forget cutting old fittings off your SS tubing. Throw away your spanners, make column changes in seconds.

With an innovative design utilizing stainless steel or a proprietary PEEK™ polymer blend (PK), Shimadzu's fittings ensure outstanding performance for both conventional and demanding analyses. These reusable fittings, including the new Nexlock Finger-Tight fittings, range in pressure ratings from 5,000 to 25,000 psi, allowing analysts to select the best option for their low-pressure HPLC or ultra high pressure liquid chromatography (UHPLC) application.

### Nexlock Finger-Tight Fittings

Nexlock is a reusable finger-tight fitting that is easy to use, providing excellent pressure capacity, durability and reliability. The fitting and tube combination ensures proper sealing to achieve a zero dead volume connection, thus minimizing peak broadening and tailing. It withstands pressures up to 130 MPa without the use of tools.

#### ■ Features

##### ■ Minimized dispersion

Connection ports vary in depth, but Nexlock ensures zero dead volume every time by removing human error, resulting in improved peak shapes.

##### ■ Reusable up to 100 times

Tubes can be connected and disconnected 100 times. Note: this is standard in use of installation method.

##### ■ Compatible with UHPLC

Working pressures up to 19,000 psi.

##### ■ Table of Nexlock UHPLC Fittings and Tubing

| Part Number  | ID    | OD    | Port        | Length | Description                                       |
|--------------|-------|-------|-------------|--------|---|
| 228-62544-11 | 0.1mm | 1/16" | 10-32 coned | 600mm  | Nexlock SS Tubing with two fittings               |
| 228-62544-13 | 0.1mm | 1/16" | 10-32 coned | 800mm  | Nexlock SS Tubing with two fittings               |
| 228-62544-61 | 0.1mm | 1/16" | ---         | 600mm  | Nexlock SS Tubing only, no fittings               |
| 228-62544-63 | 0.1mm | 1/16" | ---         | 800mm  | Nexlock SS Tubing only, no fittings               |
| 228-62544-90 | ---   | 1/16" | 10-32 coned | ---    | Nexlock Fitting Only (1 piece); no tools required |

# Fittings

## ■ Pressure rated up to 25,000 psi (1,720 bar)

- Patent pending innovative design
- Capable of up to ten repeat assembly cycles with no impact on pressure holding ability or carry-over;
- Available in multiple threaded configurations for use with 1/16 in (1.6 mm) and 1/32 in (0.79 mm) OD tubing
- Materials of construction: Stainless Steel and Proprietary PEEK™ polymer blend (PK)

Shimadzu introduces an innovative line of UHP & VHP fittings, designed to withstand extreme pressures. This patent-pending line of ground-breaking fitting systems is perfect for use within the increasingly demanding requirements of today's high performance analytical systems. The fittings are reusable when following the proper tightening torque specification. With a polymer front ferrule, there is no damage to the tubing or receiving port, also increasing the life of these components.

# GC Columns and Consumables

# GC Columns

Shimadzu offers a wide range of GC columns:

## ■ Fused silica capillary

Suitable for general purpose through to specific GC and GC/MS applications.

- SH-Rxi™, SH-Rtx™
- SH-Stabilwax™, SH- FameWax™, SH- Stabilwax™

## ■ PLOT – Fused silica and metal

Ideal for efficient, reproducible analyses of permanent gases, solvents, and hydrocarbons

- SH-Rt™-Alumina BOND/NaSO<sub>4</sub>, Alumina BOND/KCl
- SH-Rt™-Msieve 5A
- SH-Rt™-Q-BOND, SH-Rt™-U-BOND
- SH-Rt™-Silica

## ■ MXT – Metal capillary

Ideal for High-Temperature GC Analysis. General-purpose column for drugs, solvent impurities, pesticides, hydrocarbons, PCB congeners (e.g., Aroclor mixes), essential oils, and semi-volatiles.

Shimadzu GC columns undergo rigorous testing to ensure they provide you with the best separation possible. Every GC column is tested at the maximum operating temperature for the column, and specific tests are undertaken based on the application the column is targeted for. This means you can be confident of a reliable separation, column after column.

# GC Columns

Structures, polarities, properties, and uses for Shimadzu capillary column phases, in order of increasing polarity

**SH-Rxi™-1ms, SH-Rxi™-1HT,  
SH-Rtx™-1**  
Dimethyl polysiloxane

Similar to: (100%-methyl)-polysiloxane  
Polarity: nonpolar  
Uses: solvents, petroleum products, pharmaceutical samples, waxes

**SH-Rxi™-5ms, SH-Rxi™-5HT,  
SH-Rtx™-5, SH-Rtx™-5MS**  
Diphenyl dimethyl polysiloxane

Similar to: (5%-phenyl)-methylpolysiloxane  
Polarity: slightly polar  
Uses: flavors, environmental, aromatic hydrocarbons

**SH-Rxi™-5Sil MS**  
1,4-bis(dimethylsiloxy)phenylene dimethyl polysiloxane

Similar to: (5%-phenyl)-methylpolysiloxane  
Polarity: slightly polar  
Uses: flavors, environmental, pesticides, PCBs, aromatic hydrocarbons

**SH-Rtx™-20**  
Diphenyl dimethyl polysiloxane

Similar to: (20%-phenyl)-methylpolysiloxane  
Polarity: slightly polar  
Uses: volatile compounds, alcohols

**SH-Rtx™-1301, SH-Rtx™-624**  
Cyanopropylphenyl dimethyl polysiloxane

Similar to: (6%-cyanopropylphenyl)-methylpolysiloxane  
Polarity: intermediately polar  
Uses: volatile compounds, insecticides, residue solvents in pharmaceutical products

**SH-Rtx™-624Sil MS**

Similar to: (6%-cyanopropylphenyl)-methylpolysiloxane  
Polarity: intermediately polar  
Uses: pesticides, PCBs, amines, nitrogen-containing herbicides

**SH-Rtx™-35**  
Diphenyl dimethyl polysiloxane

Similar to: (35%-phenyl)-methylpolysiloxane  
Polarity: intermediately polar  
Uses: pesticides, PCBs, amines, nitrogen-containing herbicides

**SH-Rtx™-35Sil MS**

Similar to: (35%-phenyl)-methylpolysiloxane  
Polarity: intermediately polar  
Uses: pesticides, PCBs, amines, nitrogen-containing herbicides

**SH-Rtx™-200**  
Trifluoropropylmethyl polysiloxane

Similar to: (trifluoropropyl)-methylpolysiloxane  
Polarity: selective for lone pair electrons  
Uses: environmental, solvents, Freon® gases, drugs, ketones, alcohols

**SH-Rtx™-50**  
Phenyl methyl polysiloxane

Similar to: (50%-phenyl)-methylpolysiloxane  
Polarity: intermediately polar  
Uses: FAMEs, carbohydrates

**SH-Rxi™-17**  
Diphenyl dimethyl polysiloxane

Similar to: (50%-phenyl)-methylpolysiloxane  
Polarity: intermediately polar  
Uses: triglycerides, phthalate esters, steroids, phenols

**SH-Rxi™-17Sil MS**

Similar to: (50%-phenyl)-methylpolysiloxane  
Polarity: intermediately polar  
Uses: triglycerides, phthalate esters, steroids, phenols

**SH-Rtx™-1701**

Similar to:  
(14%-cyanopropylphenyl)-methylpolysiloxane  
Polarity: intermediately polar  
Uses: pesticides, PCBs, alcohols, oxygenates

**SH-Rtx™-65**  
Diphenyl dimethyl polysiloxane

Similar to: (65%-phenyl)-methylpolysiloxane  
Polarity: intermediately polar  
Uses: triglycerides, rosin acids, free fatty acids

**SH-Rtx™-225**  
Cyanopropylmethyl phenylmethyl polysiloxane

Similar to:  
(50%-cyanopropylmethyl)-methylphenylpolysiloxane  
Polarity: polar  
Uses: FAMEs, carbohydrates

**SH-Rtx™-2330**

Biscyanopropyl cyanopropylphenyl polysiloxane

Similar to: (95%-cyanopropyl)-phenyl polysiloxane  
Polarity: polar  
Uses: cis/trans FAMEs, dioxin isomers, rosin acids

**SH-Stabilwax™, SH-Rtx™-Wax**  
Polyethylene glycol

Polarity: polar  
Uses: FAMEs, flavors, acids, amines, solvents, xylene isomers

\*\*Structures, polarities, and properties also apply to metal MXT® stationary phases.

## High-Performance Capillary Columns

### ■ SH-Rxi™-1MS

- Non-polar phase: Crossbond™ 100% dimethyl polysiloxane
- Tested and guaranteed for ultra-low bleed; improved signal-to-noise ratio for better sensitivity and mass spectral integrity.
- General-purpose columns for arson accelerants, essential oils, hydrocarbons, pesticides, PCB congeners (e.g., Aroclor mixes), sulfur compounds, amines, solvent impurities, simulated distillation, oxygenates, gasoline range organics (GRO), refinery gases.
- Equivalent to USP G2 phase.
- Similar phases: HP-1ms UI, HP-1ms, DB-1ms UI, DB-1ms, Ultra-1, VF-1ms, SPB-1, Equity-1

## High-Performance Capillary Columns

### ■ SH-Rxi™-5MS

- Low-polarity phase: Crossbond™ 5% diphenyl / 95% dimethyl polysiloxane
- Tested and guaranteed for ultra-low bleed; improved signal-to-noise ratio for better sensitivity and mass spectral integrity.
- General-purpose columns for semi-volatiles, phenols, amines, residual solvents, drugs of abuse, pesticides, PCB congeners (e.g., Aroclor mixes), solvent impurities.
- Equivalent to USP G27 and G36 phases.
- Similar phases: HP-5ms UI, HP-5ms, DB-5, Ultra-2, CP Sil 8 CB, SPB-5, Equity-5

## High-Performance Capillary Columns

### ■ SH-Rxi™-17Sil MS

- Mid-polarity Crossbond™ phase (similar to 50% phenyl methyl polysiloxane)
- Low bleed for use with sensitive detectors, such as MS.
- Excellent inertness and selectivity for active environmental compounds, such as PAHs.
- Equivalent to USP G3 phase.
- Similar phases: DB-17ms, HP-17, DB-17, VF-17ms, CP-Sil 24 CB

■ SH-Rxi™-17Sil MS Structure

| ID      | df      | Temp. Range      | 30 m         | 60 m         |
|---------|---------|------------------|--------------|--------------|
| 0.25 mm | 0.25 µm | 40 to 340/360 °C | 221-75916-30 | 227-36071-01 |
| 0.32 mm | 0.25 µm | 40 to 340/360 °C | 227-36072-01 | -            |

\* Maximum temperatures listed are for shorter length columns. Longer columns may have a different maximum temperature.

### ■ SH-Rxi™-PAH

- Mid-polarity proprietary phase
- Ideal for EFSA PAH4 analysis—separates all priority compounds: benz[a]anthracene, chrysene, benzo[b]fluoranthene and benzo[a]pyrene.

| ID      | df      | Temp. Range | 30 m         | 40 m         | 60 m         |
|---------|---------|-------------|--------------|--------------|--------------|
| 0.18 mm | 0.07 µm | to 360 °C   | -            | 227-36073-01 | -            |
| 0.25 mm | 0.10 µm | to 360 °C   | 227-36074-01 | -            | 227-36074-02 |

- Best resolution of chrysene from interfering PAHs, triphenylene, and cyclopenta[cd]pyrene.

- Complete separation of benzo [b], [k], [j], and [a] fluoranthenes.

## Polycyclic Aromatic Hydrocarbons (US EPA Method 8100)

## High-Performance Capillary Columns

### ■ SH-Rxi™-624Sil MS

- Mid-polarity Crossbond™ silarylene phase (similar to 6% cyanopropylphenyl / 94%dimethyl polysiloxane)
- Low-bleed, high-thermal stability column—maximum temperatures up to 300–320 °C.
- Inert—excellent peak shape for a wide range of compounds.
- Selective—G43 phase highly selective for volatile organics and residual solvents, great choice for USP<467>.
- Manufactured for column-to-column reproducibility—well-suited for validated methods.
- Similar phases: HP-624, DB-624, VF-624ms, CP-Select 624 CB

## General-Purpose Capillary Columns

### ■ SH-Rtx<sup>TM</sup>-5MS

- Low-polarity phase: Crossbond<sup>TM</sup> 5% diphenyl / 95% dimethyl polysiloxane
- Column specifically tested for low-bleed performance.
- General-purpose columns for drugs, solvent impurities, pesticides, hydrocarbons, PCB congeners (e.g., Aroclor mixes), essential oils, semi-volatiles.
- Equivalent to USP G27 and G36 phases.
- Similar phases: HP-5, DB-5, CP Sil 8 CB, SPB-5

■ SH-Rtx<sup>TM</sup>-5MS Structure

For SH-Rtx<sup>TM</sup>-5MS columns with Integra-Guard<sup>TM</sup> column, please refer to page 135.

Carrier Gas : Hydrogen, constant flow rate 3mL/min, linear velocity 60 cm/sec.  
Oven Temp : 210 °C (hold 5 min) to 230 °C at 20 °C/min (hold 5 min)  
Detector : FID, 250 °C

# GC Columns

## Dedicated Capillary Columns

### ■ SH-Rtx™-1614

- 5% diphenyl / 95% dimethyl polysiloxane
- Optimized for PBDE analysis by EPA Method 1614.
- Short column option resolves BDE-209 three times faster, with less thermal breakdown.
- Unique deactivation gives higher BDE-209 response than competitor columns, for greater analytical sensitivity.
- Exceeds EPA Method 1614 resolution criteria for BDE-49 and BDE-71.

### ■ SH-Rt™-Silica BOND

- Bonded silica stationary phase minimizes impact of water, resulting in reproducible retention times for water-containing samples.
- Versatile column ideal for analysis of light hydrocarbons, sulfur gases, halocarbons, and carbon dioxide.
- Individually QC tested with sensitive C4 probes to ensure consistent selectivity.
- Proprietary manufacturing process practically eliminates particle release, reducing downtime due to obstructed FID jets.
- Similar phases: GS-GASPRO, CP-SilicaPLOT

| ID      | Temp. Range   | 30 m         |
|---------|---------------|--------------|
| 0.32 mm | -80 to 260 °C | 227-36620-02 |

## Sulfur Compounds in Propane

Trap columns for adhering dislodged particles from PLOT columns are also available.

Please refer to page 136.

# GC Columns

## PLOT Capillary Columns

### ■ SH-Rt™-Alumina BOND

- The reactivity of the aluminum oxide stationary phase is minimized to improve column response for polar unsaturates, such as dienes, and the column's sensitivity (or response) ensures linear and quantitative chromatographic analysis for these compounds.
- Highly selective for C1–C5 hydrocarbons
- Separate all saturated and unsaturated hydrocarbon isomers above ambient temperatures.

### ■ SH-Rt™-Alumina BOND/Na<sub>2</sub>SO<sub>4</sub>

- Na<sub>2</sub>SO<sub>4</sub> deactivation
- Acetylene and propadiene elute after butanes.
- Best separation for butene isomers (impurities in butene streams).
- Methyl acetylene elutes after 1,3-butadiene.
- Cyclopropane (impurity in propylene) elutes well before propylene.
- Similar phases: GS-ALUMINA, CP-Al<sub>2</sub>O<sub>3</sub>/Na<sub>2</sub>SO<sub>4</sub>, Alumina sulfate PLOT

| ID      | df    | Temp. Range | 50 m         |
|---------|-------|-------------|--------------|
| 0.53 mm | 10 µm | to 200 °C   | 227-36301-01 |

### ■ SH-Rt™-Alumina BOND/KCl

- KCl deactivation
- Lowest polarity alumina column in Shimadzu PLOT columns.
- Low moisture sensitivity reduces the need for frequent regeneration.
- Acetylene elutes before n-butane.
- Methyl acetylene (impurity in 1,3-butadiene) elutes before 1,3-butadiene.
- Similar phases: GS-Alumina KCl, HP-PLOT Al<sub>2</sub>O<sub>3</sub> KCl, CP-Al<sub>2</sub>O<sub>3</sub>/KCl, Alumina chloride PLOT

| ID      | df    | Temp. Range | 50 m         |
|---------|-------|-------------|--------------|
| 0.53 mm | 10 µm | to 200 °C   | 221-76139-50 |

## Refinery Gas

## PLOT Capillary Columns

### ■ SH-Rt™-Q-BOND

- Non-polar PLOT column incorporating 100% divinylbenzene
- Excellent for analysis of C1 to C3 hydrocarbons as well as isomers and alkanes up to C12
- High retention for CO<sub>2</sub> simplifies gas analysis; CO<sub>2</sub> and methane separated from O<sub>2</sub>/N<sub>2</sub>/CO. (Note: O<sub>2</sub>/N<sub>2</sub>/CO not separated at ambient temperature.)
- Use for analysis of oxygenated compounds and solvents.
- Similar phases: HP-PLOT Q, CP-PoraPLOT Q, CP-PoraBOND Q, Supel-Q PLOT

| ID      | df    | Temp. Range   | 30 m         |
|---------|-------|---------------|--------------|
| 0.32 mm | 10 µm | to 280/300 °C | 221-75764-30 |
| 0.53 mm | 20 µm | to 280/300 °C | 221-75765-30 |

### ■ SH-Rt™-U-BOND

- Polar PLOT column, incorporating divinylbenzene ethylene glycol / dimethylacrylate.
- Highest polarity porous polymer column in Shimadzu PLOT columns.
- Highly inert for the analysis of polar and nonpolar compounds.
- Ideal for trace H<sub>2</sub>S, COS, and mercaptans in hydrocarbon streams.
- Similar phases: HP-PLOT U, CP-PoraPLOT U, CP-PoraBOND U

| ID      | df    | Temp. Range | 30 m         |

## Guard Capillary Columns

### ■ SH-Rxi™ Guard / Retention Gap Columns

- Extend column lifetime.
- Excellent inertness—obtain lower detection limits for active compounds.
- Sharper chromatographic peaks by utilizing retention gap technology.
- Maximum temperature: 360 °C.

| ID      | 5 m          | 10 m         |
|---------|--------------|--------------|
| 0.25 mm | 227-36303-01 | 227-36304-01 |
| 0.32 mm | 227-36305-01 | 227-36306-01 |
| 0.53 mm | 227-36307-01 | 227-36308-01 |

### ■ SH-Particle Trap (for PLOT columns)

- Includes two Press-Tight® connectors and a 2.5 m column.
- Protects detector and valves; connects between column and detector or valve.
- Eliminates detector spikes and scratches in valve rotors.

| Description                                 | P/N          |

# GC Packed Columns

The Shimadzu a wide selection of packed columns that fits in most GC instruments in the market.

Some of the more commonly used columns below:

## ■ ShinCarbon ST Columns (packed & micropacked)

- Rapid separations of permanent gas/light hydrocarbon mixtures.
- Separate permanent gases, including carbon monoxide and carbon dioxide, without cryogenic cooling.
- Excellent compatibility with most GC detectors—minimal bleed, minimal baseline rise.
- Preconditioned, less than 30 minutes to stabilize.
- Maximum temperature of 280 °C/300 °C.

## ■ Molecular Sieve Columns

- Molecular sieve packed columns easily separate permanent gases at above-ambient temperatures. In addition, our molecular sieves are pre-activated and ready to use.

## ■ Micropacked GC Columns

- Higher capacity than PLOT columns.
- Increased efficiency over traditional packed columns.
- Made from inert, flexible SilcoSmooth tubing.
- Wide range of packings available.

## ■ Rt-XLSulfur Columns (packed & micropacked)

- Optimized columns for low ppbv sulfur analyses.
- Eliminate the need for PTFE tubing.
- Column and end fittings are Sulfinert treated for maximum inertness.
- Maximum temperature of 290 °C.

## ■ Porous Polymer Columns (packed)

- Available in both glass and stainless steel tubing.

For availability and ordering information on custom columns, please contact your representative direct sales/distributors.

# GC Packed Columns

## ShinCarbon ST Columns

Analyzing the permanent gases oxygen, nitrogen, methane, carbon monoxide, and carbon dioxide has been virtually impossible for a single gas chromatography (GC) or gas-solid chromatography (GSC) column, without sub-ambient temperatures.

ShinCarbon ST material, a high surface area carbon molecular sieve (~1500 m<sup>2</sup>/g), is the ideal medium for separating gases and highly volatile compounds by GSC. A 2 m x 1 mm ID micropacked column containing ShinCarbon ST separates the permanent gases in 10 minutes, without cryogenic cooling (Figure 1).

ShinCarbon ST columns can also separate light hydrocarbon / permanent gas mixtures. Figure 2 shows an analysis of permanent gases plus acetylene, ethylene, and ethane, completed in less than 20 minutes. Natural gas components (70% methane) also are cleanly separated (Figure 3). Other potential applications for ShinCarbon ST include analyses of sulfur dioxide and Freon® fluorocarbons (Figure 4).\*

**Figure 1** Separate permanent gases in 10 minutes, without cryogenic cooling.

**Figure 2** Rapidly analyze light hydrocarbon/permanent gas mixtures.

**Figure 3** Separate components in natural gas.

# GC Packed Columns

## Molecular Sieve 5A / 13X

Molecular sieve packed columns easily separate permanent gases at above-ambient temperatures. The two most common molecular sieves used are 5A and 13X.

Molecular sieve 5A and 13X packings differ in pore size and composition, causing differences in retention and selectivity for many gases. The 5A packing provides greater retention, which improves the separation of argon, oxygen, and nitrogen, and is a better choice for analyzing the trace impurities in inert gases typically used in the semiconductor industry. The 13X packing often is preferred for analysis of carbon monoxide, particularly at trace concentrations, because lower retention results in sharper chromatographic peaks and improved detection limits.

**Figure 1** Permanent gases on Molecular Sieve 5A and Molecular Sieve 13X packed columns.

## Molecular Sieve Packed Columns

| Molesieve                     | OD   | ID / mm | Mesh            | Length / m |

Molecular Sieve 5A and 13X are available in both stainless steel and glass column.

For availability and ordering information on custom columns, please contact your representative direct sales/distributors.

# GC Packed Columns

## Micropacked GC Columns

Micropacked columns are highly efficient and provide good sample capacity, resulting in a powerful tool for solving many difficult application problems. The unsurpassed inertness of SilcoSmooth tubing is based on Siltek deactivation, which allows the column to be flexed and coiled without any fear of chipping or cracking the inert surface.

# GC Packed Columns

## Rt-XLSulfur Columns (Packed and Micropacked)

Rt®-XLSulfur packed and micropacked columns are designed for ppb-level sulfur analysis. Every component of the sample pathway is treated to provide the highest degree of inertness for reactive, low-level sulfur compounds. The porous polymer phase features a unique surface modification, which results in excellent peak symmetry and thermal stability to 300 °C.

The high performance and reproducibility of the Rt®-XLSulfur column enables resolution and quantitation of COS, H<sub>2</sub>S, SO<sub>2</sub>, CH<sub>3</sub>SH, (CH<sub>3</sub>)<sub>2</sub>S<sub>2</sub> at low ppb concentrations. These sulfur compounds typically are found in pulp mill byproducts, natural gas, and petroleum products.

### ■ Features:

- Optimized columns for low ppbv sulfur analyses.
- Eliminate the need for PTFE tubing.
- Column and end-fittings are Sulfinert® treated for maximum inertness.

**Figure 1** The Rt®-XLSulfur column analyzes 50 ppb levels of sulfur compounds, providing low bleed and good symmetry.

| Column                             | OD     | ID / mm | Length / m |

# Syringes

## SAMPLE INTRODUCTION – Syringes

Shimadzu Diamond syringes are the result of technological advancements in materials, design, and engineering. Designed to meet the ever increasing levels of sensitivity required by today's analyses, Shimadzu Diamond syringes give you a new level of accuracy and precision.

### LONGER LIFE

Shimadzu Diamond syringes have a longer life. The improved solvent resistance and maximized operational temperature range along with the smoothest available internal glass surface ensure you receive the longest lifetime from your Shimadzu syringe.

### SUPERIOR PERFORMANCE AND ROBUSTNESS

Shimadzu Diamond syringes have superior performance and robustness with unsurpassed levels of operational strength and durability. Potential for contamination is significantly reduced by the near-zero syringe dead volume and minimized adhesive in the flow path.

### REDUCED CARRYOVER

Engineering enhancements have eliminated areas where fluid can become trapped and potentially cause carryover, improving accuracy, precision and analysis results.

# Syringes

## Syringe Selection Guide

If a syringe is being used by hand, a manual syringe should be selected. If a syringe is installed in an AOC autosampler, then choose the appropriate syringe and volume to suit your instrument and application.

## Syringe Style

Fixed Needle

- Better option for experienced users or for applications requiring trace sample levels
- Recommended for use with an autosampler because the probability of needle bending is minimal
- Minimal sample carryover

Gas Tight

- For Luer Lock needles and fittings
- Specifically designed to install and secure Luer Lock needles easily

## Needle Tip Style

Cone: Autosampler

The cone-shaped needle tip is specially developed to withstand multi-injection demands and improve septum lifetime when used with an autosampler. The cone design effectively "parts" the septum during piercing instead of cutting it, as would a bevel needle.

Side Hole Dome

Samples are filled and dispensed through the side hole, eliminating septum plugging of the needle. Ideal for large-volume gas injections. The solid domed tip minimizes septum damage.

## Plunger Style

PTFE Tipped Plunger

Removable Needle

- Better option for inexperienced users
- Reduce cost if used in precipitation of salts or in situations in which it may bend easily (such as thick septum) Available for many methods by changing needles

Bevel: Manual Injection

The standard general-purpose needle tip style supplied with many syringes is a 20° bevel tip. It is the preferred option for manual injection when piercing the septum in exactly the same place is difficult. The bevel tip is designed for optimum septum penetration and prevention of septum coring.

- PTFE Tip enables gastight analysis
- Suitable for both liquid and gas samples
- Ideal for analysis of highly viscous liquid because it reduces the possibility of the plunger sticking due to micro particles (samples should have no effects with PTFE)
- Plunger is replaceable

# Syringes

## Manual Autosampler or Instrument Syringes

If a syringe is being used by hand, a manual syringe should be selected. If a syringe is installed in an AOC autosampler then choose the appropriate syringe and volume to suit your instrument and application.

Shimadzu autosampler syringes are specifically designed to meet instrument dimensional specifications, have an accuracy of better than  $\pm 1\%$  and are designed for precise, worry-free overnight sampling.

## Needle Tip Styles

Cone: GC Autosampler

The cone shaped needle tip is specially developed to withstand multi injection demands and improve septum lifetime when used with the AOC autosampler. The cone design effectively "parts" the septum during piercing instead of cutting it, as would a bevel needle.

LC: HPLC

These needles are used for LC and HPLC valve injection and have a  $90^\circ$  square tip with rounded and polished edges. This eliminates damage to the valve's rotor seal and stator face. This needle tip style is a good choice for general liquid dispensing.

Bevel: Manual GC

The standard general purpose needle tip style supplied with many Shimadzu syringes is a  $20^\circ$  bevel tip. It is the preferred option for manual injection where piercing the septum in exactly the same place is difficult. The bevel tip is designed for optimum septum penetration and prevention of septum coring.

Side Hole Dome:

Samples are filled and dispensed through the side hole eliminating septum plugging of the needle. Ideal for large volume gas injection. The solid domed tip minimizes septum damage.

Dome:

This style needle is recommended for use with predrilled septa. The tip is rounded and polished to help septum penetration.

## Valves

OPEN  $\longleftrightarrow$  CLOSED

The push-button valve attaches directly to any luer lock 1 mL – 100 mL Shimadzu syringe.

OPEN  $\longleftrightarrow$  CLOSED

The push-button valve attaches to any luer lock 5 mL – 100 mL Shimadzu syringe.

## Micro Solid Phase Extraction Syringe MEPS™

MEPS™ is Micro Extraction by Packed Sorbent and is used for sample preparation and handling. MEPS is the miniaturization of conventional SPE packed bed devices from milliliter bed volumes to microliter volumes. The MEPS approach to sample preparation is suitable for reversed phases, normal phases, mixed mode or ion exchange chemistries. MEPS is available in a variety of common SPE phases.

### Meps Barrel Insert And Needle

The MEPS Barrel Insert and Needle (BIN) assembly contains the stationary phase, and is built into the syringe needle.

#### SAMPLE SIZE AND SENSITIVITY

Sample volumes may be as little as 10 µL, or by taking multiple aliquots of 100 µL or 250 µL, samples of 1 mL or larger may be concentrated.

#### AUTOMATION

Extract samples and make injections on-line using a single device, reducing sample processing times and the need for operator intervention.

#### SORBENT LIFE

BIN life is dependent on the specific matrix being analyzed. For example, C18 analysis of whole plasma samples is conservatively 25-100 samples before the BIN needs to be changed. BIN life of cleaner samples is significantly longer.

#### FLEXIBLE AND EASY TO USE

The dimensions of the sorbent bed ensure performance remains identical to conventional SPE devices when used for extraction of similar samples. The AOC-MEPS system was developed to incorporate MEPS into a process automation workflow, combining sample preparation and analysis in a single platform.

#### AOC-MEPS System

Chromatogram of 22 pesticides standard solution (40 ng/mL)

When automated by an AOC-MEPS system, the injection volume is much larger compared to the commonly used GC injection volumes of 1 - 2 µL. With AOC-MEPS, the typical injections are 50 to 200 µL of elution solvent.

A large volume injection technique that removes the solvent volume from inside the injector unit while condensing the target compounds should be employed.

#### CARRYOVER

The small quantity of phase in the MEPS BIN is easily and effectively washed between samples to reduce the possibility of carryover. This washing process is not practical with off-line SPE devices. With automated MEPS, washing occurs while the previous sample is running.

# GC Inlet Liners

The GC inlet functions as the interface between the syringe and the GC capillary column, where the sample is introduced, vaporized, mixed with carrier gas and transferred to the column. Shimadzu instruments offer several types of inlets - split, splitless, programmable temperature vaporization (PTV) and on-column.

The inlet liner prevents the sample contacting the metal walls of the injector block. Inlet liner geometry and packing materials enable the inlet liner to achieve greater heated surface area; this additional surface area can often improve sample vaporization. Conversely, choosing the wrong inlet liner geometry can significantly decrease the reproducibility and quality of analysis.

| Injection Technique | Sample Types   | Inlet Liner Geometry   | Function   |
|---------------------|--|--|--|
| Splitless           | Trace Level Analyses/<br>Active Compounds  | Taper<br>               | A bottom taper focuses sample onto the head of the column and minimizes sample contact with metal parts of the inlet. The addition of quartz wool to your inlet liner promotes mixing of analytes, aids the vaporization of liquid samples, and works as a trap to collect non-volatile residue in the sample (i.e. protects capillary column from 'dirty' samples). |
| Split               | General Purpose/<br>Concentrated Samples/<br>Dirty Samples   | FocusLiner™<br>         | Ensures quartz wool remains in the correct position in the liner. Excellent reproducibility results from the wiping of the sample from the syringe needle and the prevention of droplet formation. Minimizes high molecular weight discrimination.   |
| Splitless           | Trace Level Analyses/<br>Dirty Samples/<br>Wide Boiling Point Range  | Taper FocusLiner™<br> | Bottom taper focuses sample onto the head of the column and minimizes contact with metal parts of the inlet. Excellent reproducibility results from the wiping of the sample from the syringe needle and the prevention of droplet formation. Minimizes high molecular weight discrimination.  |
| Direct              | Trace Level Analyses/<br>Active Compounds  | Direct Taper<br>      | Direct inlet liners facilitate maximum transfer of sample by connecting directly to the GC column and inhibiting sample degradation due to hot metal components inside inlet.  |
| Split/Splitless     | General Purpose/<br>Concentrated Samples/<br>Dirty Samples (only if<br>quartz wool is present)/<br>Gaseous Samples (also<br>purge & trap, headspace) | Straight<br>          | Straight inlet liners facilitate higher split flows. Narrow bore straight inlet liners facilitate fast GC work. Small injection volumes of less than 0.5 µL are best used with a narrow bore. Narrow bore straight inlet liners improve focussing of gaseous samples (purge, trap & headspace).  |

## Inlet Liner Deactivation

Every batch of inlet liners are tested for inertness using the EPA 8081B method. This standard method ensures that each batch of inlet liners has less than 3 % Endrin breakdown from a 1 ppm injection.

# GC Inlet Liners

## Glass Insert for Capillary Column Analysis

Glass insert is very important to prevent the column from being contaminated by sample components. Please choose an appropriate insert according to your system model, injection port and injection method, and exchange it regularly to avoid poor reproducibility and peak shape caused by the crossover of residual samples, etc.

\*1 Required if the WBC Attachment is used for a packed column injection in GC-2014, Insert for GC-14 septum purge unit is P/N: 221-38151-04

\*2 Wool is 25mm from the top of insert.

\* Can be used for AOC-6000 SPME

\*1 GC-2010 OCI requires an additional adapter (P/N: 221-49298-91).

\*2 GC-17 OCI requires an additional adapter (P/N: 221-42222-91).

### Glass Insert for Packed Column Analysis

When using a glass column, one may add a glass insert to prevent the column from accumulating non-volatile components. Please choose a proper insert according to the inner diameter of the glass column.

When using a stainless column, it is necessary to connect a glass insert to a 3.0 mmID column at the side of the injection unit. Please exchange it regularly to avoid poor reproducibility and peak shape caused by the crossover of residual sample, etc.

Note: Glass insert cannot be used in a GC-8A Series instrument when using glass columns.

# Septums

## Injection Port Septum

| Description  | P/N          | Color       | Description   |
|--|--------------|-------------|---|
| Standard type (20 pcs)<br>                | 201-35584    | White       | <ul style="list-style-type: none"> <li>General-purpose septum</li> <li>Maximum temperature (INJ setting temperature): 250 °C</li> </ul>   |
| LL Septum<br>(long life type, 20 pcs)<br> | 221-48972-91 | Blue        | <p>Provides significant durability improvements compared to a conventional low-bleed septum, offering both low bleed and long life.</p> <p>The problem of sticking to the vaporizing chamber during continuous use at high temperatures experienced with a conventional septum has also been eliminated.</p> <ul style="list-style-type: none"> <li>Suitable for high-sensitivity analysis</li> <li>Maximum temperature (INJ setting temperature): 450°C</li> </ul>   |
| HT Septum<br>(high temp type, 20 pcs)<br> | 221-48398-91 | Brown       | <p>Using this septum alleviates the problem of reduced durability when the vaporizing chamber is used continuously at 450°C. Compared to the LL septum, the increase in bleed when used at high temperatures is kept at a lower level.</p> <p>The problem of sticking to the vaporizing chamber during continuous use at high temperatures experienced with a conventional septum has also been eliminated.</p> <ul style="list-style-type: none"> <li>Suitable for high-sensitivity analysis at high temperatures</li> <li>Maximum temperature (INJ setting temperature): 450°C</li> </ul> |
| Low-bleed Septum<br>(25 pcs)<br>        | 221-76650-01 | Green       | <p>This septum is least influenced by a plasticizer. Better prevents septum coring.</p> <ul style="list-style-type: none"> <li>Low-bleed, suitable for high-sensitivity analysis</li> </ul>   |
| Enduro Blue Septum (50 pcs)<br>         | 221-75180    | Light Blue  | <ul style="list-style-type: none"> <li>Low-bleed, suitable for high-sensitivity analysis at high temperatures</li> <li>Maximum temperature (INJ setting temperature): 350°C</li> </ul>  |
| Premium Green Septa (50 pcs)<br>        | 227-35004-01 | Light green | <ul style="list-style-type: none"> <li>Low bleed, highly robust (max. usable temp. 350°C)</li> <li>High durability, proper sealing and good resistance to most chemical solvents.</li> <li>Useful for trace analysis and other applications where high sensitivity is critical</li> </ul>   |
| Perforated septum for HS-10<br>         | 221-76863-96 | White       | <ul style="list-style-type: none"> <li>For HS-10 only</li> <li>To ensure cleanliness and inertness</li> <li>Maximum temperature (INJ setting temperature): 250 °C</li> </ul>  |

Low-bleed septum is not completely free of bleeding. The type of bleeding that occurs varies with the septum, and results in different patterns on chromatograms. In the case of high-sensitivity analysis, it is necessary to select a septum whose bleeding will not occur at a point that interferes with the peak of the target compound. Conditioning for several hours between 200°C and 250°C after extraction with hexane may help to reduce bleeding.

In the case of using a syringe for AOC, it is recommended to exchange the septum after about 100 injections. If the outside diameter of a needle of a gastight syringe is thick, it is recommended to exchange after about 50 injections.

# Ferrules

Ferrules are available in a variety of different materials, shapes and sizes depending on their use, the instrument and the size of the capillary column being used. Probably the most important but difficult aspect of choosing a ferrule is the selection of the material type. The table below will help you choose the appropriate ferrule material for your application.

## When choosing ferrules ensure you consider the following:

- 1) The material that best suits your application.
- 2) The connection type you want.

The following selection table will assist with your decision.

| Ferrule Material Type | Graphite  | Graphite Vespel®   | SilTite™ Metal  | ClickTek Ferrule  |
|-----------------------|---|--|---|---|
|                       |    |   |   |    |
| Features              | <ul style="list-style-type: none"><li>• Easy to use.</li><li>• Forms a stable seal.</li><li>• Soft material.</li><li>• Porous to oxygen.</li><li>• Can be reused.</li><li>• Forms a soft grip with capillary column.</li><li>• Low emissions.</li></ul> | <ul style="list-style-type: none"><li>• A composite of graphite and Vespel®.</li><li>• Mechanically robust.</li><li>• Hard material, long lifetime.</li><li>• Forms a strong grip with capillary column.</li><li>• Cannot be reused with another capillary column.</li><li>• Requires re-tightening.</li></ul> | <ul style="list-style-type: none"><li>• Specifically developed to overcome the problems associated with the use of 100% graphite and composite ferrules.</li><li>• Strong seal on capillary columns.</li><li>• Leak free - The ferrule and nut expand and contract at the same rate eliminating any chance of leaks with temperature cycling.</li><li>• Nut does not need re-tightening after initial temperature cycles.</li></ul> | <ul style="list-style-type: none"><li>• Easy to use</li><li>• Leak free</li><li>• Specially designed to use with ClickTek Connector on Nexus GC-2030</li><li>• Cannot be reused with another capillary column</li><li>• Not suitable for stainless steel column</li></ul> |
| Suitable Uses         | <ul style="list-style-type: none"><li>• Column to injector connection.</li><li>• Non-mass spectrometer detectors (FID, TCD, FTD, FPD, ECD, BID).</li></ul>  | MS interfaces, although even with a good seal will leak air compared to SilTite™ ferrules.   | Ideal for MS interfaces and advanced flow technology due to leak-free   | <ul style="list-style-type: none"><li>• Column to injector connection</li><li>• Non-mass spectrometer detectors (FID, TCD, FTD, FPD, ECD, BID).</li></ul>   |
| Not Suitable For      | Connecting columns to mass spectrometers, as porous to oxygen.  | High temperature applications.   | –   | –   |
| Risks                 | <ul style="list-style-type: none"><li>• Can leave residue inside your column.</li><li>• Can extrude into the injector or detector if it is over-tightened.</li></ul>  | If not re-tightened after installation and temperature cycles of the GC, air may enter the column or detector decreasing sensitivity of the analysis and possibly degrading the column as well as components of the system.  | Over-tightening of the seal can introduce leaks into the system. Follow the recommended installation instructions to avoid this problem.  | –   |
| Operating Temperature | Upper limit of 450 °C   | Upper limit of 325 °C  | No temperature limit in GC use.   | –   |

## Ferrules

| Description                                | Specification   | P/N          |

Filter for split, for Nexis GC-2030

# Gas Filtration

# Gas Filtration

## Ensuring a Super-Clean Analytical Journey

Impurities in gases, such as hydrocarbons, moisture and oxygen, can contaminate the gas line and instrument, cause column degradation and affect the accuracy of your analysis results, which may lead to instrument downtime. Even though high-purity gases are used, contaminants may result from pressure regulators or other parts of the gas line. Therefore, an additional gas filter is essential.

Introducing the *Shimadzu Super-Clean Gas Filter!*

Example of Shimadzu Gas Filter Kit for GC-FID

## Ensure High-purity Gas

The Shimadzu Super-Clean Gas Filter can remove the impurities (hydrocarbons, moisture and oxygen) and outlet 99.9999% pure gas. The use of high-purity and contaminant-free gases reduces column degradation, prevents ghost peaks and baseline fluctuations, eliminates excessive detector noise, and keeps your instrument in good working performance.

Using the Shimadzu Super-Clean Gas Filter results in significantly lower detector noise.

# Gas Filtration

## Easy and Leak-tight Replacement

Installing the filter

The design of the Shimadzu Super-Clean Gas Filter makes it possible to replace filter cartridges quickly and easily without any tools. Spring-loaded check valves seal when a cartridge is removed and open only when a new cartridge has been locked in place, which prevents contamination of the system during the replacement process.

Swagelok connector can be connected directly to the Shimadzu gas supply pipe, ensuring a leak free and completely clean gas line

## Unique Body Design

A plastic body helps with checking the indicators and replacing the filter cartridges. However, it also allows contaminants to diffuse into the instrument and cause helium to leak. To address this issue, the Shimadzu Super-Clean Gas Filter has been designed to pack the absorbents in glass inside the plastic body, thereby preventing diffusion.

Other filter with plastic body

Shimadzu Super-Clean Gas Filter

## Easy-to-read Indicator

The Shimadzu Super-Clean Gas Filter is designed with an easy-to-read indicator. It changes color when the absorbent is saturated, indicating when filter cartridges should be replaced.

Before using

If absorbent is saturated,  
the indicator changes color

### Installation Kits

**Catalog No.** 227-37001-02  
227-37001-03 (Helium)

| <b>Usable for</b> | <b>Benefit</b>                            |
|-------------------|---|
| GC/MS             | Higher data accuracy and less maintenance |
| GC/TCD            | Greater sensitivity and less maintenance  |

#### **GC/MS TRIPLE FILTER KIT**

The triple combination filter kit is ideal for purifying GC/MS carrier gases. It contains oxygen, moisture and hydrocarbon scrubbers in one easy to change economical cartridge

**Catalog No.** 227-37002-01

| <b>Usable for</b> | <b>Benefit</b>      |
|-------------------|---------------------|
| GC/ECD            | Greater sensitivity |

#### **GC/ECD FILTER KIT**

Removes oxygen, moisture and hydrocarbons from the carrier gas and removes moisture and oxygen from the make-up and purge gas.

## Gas Filtration

### Installation Kits

**Catalog No.** 227-37003-01

**Usable for**      **Benefit**

GC/FID      Greater sensitivity

#### FID

#### 3 POSITION KIT

The FID Filter kit is the perfect all-in-one solution for purifying flame ionization detector (FID) fuel gases together with the carrier gas. This kit removes hydrocarbons, moisture and oxygen from the carrier gas and removes both moisture and hydrocarbons from the Hydrogen and Air fuel gases.

**Catalog No.** 220-97332-11

**Usable for**      **Benefit**

LC/MS      Greater sensitivity

#### LC/MS

#### HYDROCARBON KIT

Up to 20 L/min. of hydrocarbon-free nitrogen per minute with this LC/MS High Flow Kit

**Catalog No.** 220-97332-12

**Usable for**      **Benefit**

LC/MS      Greater sensitivity

#### LC/MS

#### MOISTURE KIT

Up to 20 L/min. of moisture-free nitrogen per minute with this LC/MS High Flow Kit

**Catalog No.** 220-97332-13

**Usable for**      **Benefit**

LC/MS      Greater sensitivity

#### LC/MS COMBI

#### (HYDROCARBON/MOISTURE) KIT

Removes Moisture and Hydrocarbons from high flow gas streams.

## COMBI Filters

**Catalog No.** 227-37011-02

### Specifications

|                               |  |
|-------------------------------|--|
| <b>Outlet Gas Quality (%)</b> | > 99.9999  |
| <b>Maximum Pressure</b>       | 11 bar (160 psi)   |
| <b>Maximum Flow</b>           | 7 L/min.   |
| <b>Usable For</b>             | Inert carrier gas, He, H <sub>2</sub> , N <sub>2</sub> , AR, Air |
| <b>Dimensions</b>             | 24 cm x Ø 4.4 cm   |
| <b>Weight</b>                 | 0.26 Kg  |
| <b>Estimated Lifetime</b>     | > 2 years  |

### COMBI (HYDROCARBON/MOISTURE) FILTER

The Fuel Gas Filter is perfect for purifying flame ionization detector (FID) fuel gases, removing both moisture and hydrocarbons. Using the Fuel Gas Filter for FID Hydrogen and air will produce a stable baseline, improving overall reproducability and sensitivity.

### Capacity

|                  |                   |
|------------------|-------------------|
| H <sub>2</sub> O | 3.5 g             |
| HC               | 6 g (as n-butane) |

**Catalog No.** 227-37011-04

| 220-97332-03                       | 1/4" SS         |
| 220-97332-04                       | 1/8" SS         |
| Usable for                         |                 |
| 1, 2, 3 and 4 position base plates |                 |

### STANDARD BASE PLATE CONNECTOR SET

Replacement connectors for standard base plates.

| Catalog No.           | Connection Type |
|-----------------------|-----------------|
| 220-97332-05          | 1/4" Brass      |
| 220-97332-06          | 1/4" SS         |
| Usable for            |                 |
| High flow base plates |                 |

### HIGH FLOW BASE PLATE CONNECTOR SET

Replacement connector for high flow base plates.

| Catalog No.  | Description                                     |
|--------------|---|
| 220-97332-07 | 0.5 Micron Particle Filter (1/4" Brass)         |
| 220-97332-08 | 0.5 Micron Particle Filter Cup Replacement Pack |

### PARTICULATE FILTER

Particulate filter for high flow base plates.

# Gas Filtration

## Gas Filter System Components

### Base Plate

Connecting unit with in- and outlet connectors for the gas line and two spring-loaded check valves that automatically start the flow of gas once a filter is installed.

### Filter Cartridge

The filter cartridges are made of glass to prevent diffusion, and protected by a plastic housing for safety. The PTFE seals at the base of the Filter will only be punctured during installation on the base plate.

### Universal Ring Nut

The Universal Ring Nut is used for mounting a filter cartridge or flush-cap to a base plate. It can also serve as a mounting point for the Electronic Maintenance Indicator device.

### Electronic Indicator

Optional Electronic Maintenance Indicator device warns when scheduled replacement or maintenance is due.

### Wall Mount Bracket Set

Optional wall mounting brackets to mount a base plate to a wall.

### Stirrer Assembly (220-92280-00)

A single bottom stirrer that sits under the standard cuvette is also available. The assembly includes a motor to drive the stirrer connected by a ribbon. Stir bars are not provided.

## ■ Tray Cell

The Hellma Tray Cell is designed for measurements e.g. of DNA/RNA or protein samples and enables highly accurate analysis of extremely small samples with remarkable reproducibility. Using the 1 mm or 0.2 mm cap creates a defined optical light path of 1 mm and 0.2 mm, respectively. This generates virtual dilution factors of 1:10 or 1:50 in comparison to a measurement with a standard 10 mm cuvette. This feature saves time and avoids dilution errors. If desired, samples can be retrieved after the measurement for further processing. The required sample volume for the 1 mm cap is 3 µl to 5 µl, and for the 0.2 mm cap 0.7 µl to 4 µl.

### ■ Starna DMV-Bio Demountable Micro-Volume Cell

The Starna Demountable Micro-Volume (DMV) Bio Cell uses advanced precision micro-machining techniques and materials to produce a patented high energy optical system which ensures that sufficient energy is available to measure low volume samples accurately and reproducibly across a wide absorbance range. The cell is ideal for biological applications where DNA and proteins measurements are routinely performed and allows for measurements of sample volumes as low as 0.6 µL. The patented cell design utilizes a magnetic closure mechanism to facilitate rapid filling/emptying plus easy cleaning of the cell for convenience and to prevent carryover. This cell combined with the Shimadzu UV-1900 is an excellent choice for biological laboratories needing routine analysis of micro-volume samples.

## ■ Capillary Disposable Cuvettes

Provides a cuvette set for use in Hoescht Dye and Ethidium Bromide assays. Set consists of capillary cell holder, set of quartz capillary cells, Allen wrench, and Critoseal. The adapter fits in the standard cell holder.

| Part No.     | Material | Pathlength   | Special Holder or Spacer Needed        | Volume (theoretical)              | Wavelength Range | Details   |
|--------------|----------|--|--|-----------------------------------|------------------|---|

## ■ Hellmanex III - Cleaning Solution

Liquid concentrate low in phosphates. All organic active cleaning ingredients are over 80 % biodegradable according to the OECD guideline 302 B. This product therefore complies with the most recent requirements for the reduction of environmental pollution. Highly corrosive and etching substances such as potassium hydroxide and chlorine were specifically replaced with cleaning agents which are gentle on materials and skin. 1.3kg (1L) in PE bottle. (P/N: 220-92910-95)

| 220-92910-83 | Quartz   | 10x4 mm    | NO                              | 1.4 mL | 200 - 2500 nm    | 12.5x12.5x45 mm  | PTFE lid                                     |
| 220-92910-84 | Quartz   | 10x4 mm    | NO                              | 1.4 mL | 200 - 2500 nm    | 12.5x12.5x45 mm  | PTFE stopper                                 |
| 220-92910-85 | Quartz   | 3x3 mm     | NO                              | 45 µL  | 200 - 2500 nm    | 12.5x12.5x45 mm  | PE threaded stopper, Only 3 windows polished |

## ■ Stirrer Cells

These cells are often used when measurements must be taken from a sample being stirred.

Note: Each cell includes one magnetic stirrer.

| Part No.     | Material | Pathlength | Special Holder or Spacer Needed | Volume | Wavelength Range | Exterior (LxWxH) | Details  |
|--------------|----------|------------|---------------------------------|--------|------------------|------------------|--|
| 220-92910-86 | Quartz   | 10x10 mm   | NO                              | 3.5 mL | 200 - 2500 nm    | 12.5x12.5x45 mm  | PTFE lid, magnetic base Inside width =10 mm                          |
| 220-92910-87 | Quartz   | 10x4 mm    | NO                              | 1.5 mL | 200 - 2500 nm    | 12.5x12.5x45 mm  | PTFE lid, magnetic base Inside width = 4 mm One stirrer bar included |

## Other Consumables

| Part No.     | Item Description   | Description  | Picture   |
|--------------|--|--|---|
| 202-30242-04 | Neutral Density Filter 10% (Photometric Accuracy Standard, UV) | 10% Neutral Density Filter for Photometric Accuracy checks. This is a non-certified standard meant to be used for quick tests only   |   |
| 202-30242-05 | Holmium Oxide Filter (Wavelength Accuracy Standard, UV)        | Holmium Oxide Filter for Wavelength Accuracy checks. This is a non-certified standard meant to be used for quick tests only  |  A black rectangular filter holder with a central slot containing a thin, light-colored rectangular filter. A small white label with the number '6' is attached to the left side of the holder. |
| 220-92220-00 | Barium Sulfate (BaSO4) 500g                                    | Barium Sulfate powder for reflectance plates used in Integrating Spheres   |   |
| 204-04691-00 | Long Pass Filter Set for Fluorescence                          | Set contains seven cut-off filters for use in Standard Solid Sample Holders of Shimadzu Fluorescence Spectrophotometer: IHU-310, U-340, L-42, Y-50, O-56, R-60, and B-390. |   |

Note: For a wider selection of accessories and small parts, refer to Shimadzu UV-Vis and Fluorescence accessories brochures or contact your local Shimadzu representative.

## FTIR Consumables

| Part No.     | Item Description                                    | Description  | Picture |
|--------------|---|--|---------|
| 200-53655-00 | Silica Gel, Desiccant for FTIR                      | High performance silica gel desiccant with superior moisture-absorbing properties. Packages have moisture indicating beads to alert the user when it is necessary to change the desiccant. Packaged as 30 individual packs of 10 grams each. |         |
| 220-92837-00 | Polystyrene Film Standard, NIST Traceable           | Standard Reference Material for use in the calibration and checks of the wavelength accuracy of FTIR spectrometers. Contains 3 matte-finish polystyrene film standards of 38 µm thickness  |         |
| 202-30689-01 | Polystyrene Film Standard (Shimadzu), non-certified | Non-certified Polystyrene Standard for use in the quick checks of the wavelength accuracy of FTIR spectrometers. Contains 1 polystyrene film with polystyrene spectrum printed on the hard paper around the film                             |         |

| Part No.                | Item Description                    | Description  | Picture |
|-------------------------|-------------------------------------|--|---------|
| 220-93614-01            | Basic Solid Sample Preparation Pack | The Pack includes a 2 Ton Manual Hydraulic Press, a Pestle and Mortar, a 50g tub of KBr Powder, a 7mm Pellet Die with Pellet Ring Holder, a 7mm Disc Holder with Rectangular Mount and a Spare Pellet Ring Holder. |         |
| <b>Individual Items</b> |                                     |  |         |
| 220-93202-51            | KBr Salt Plates (Pack of 6)         | KBr Salt Plates for FTIR, 25mm dia, 4mm thickness (Pack of 6). For FTIR liquid and nujol analysis where samples are sandwiched between two plates  |         |
| 220-93614-06            | Mini Mortar and Pestle              | Mini mortar and pestle for FTIR. 4cm diameter bowl   |         |
| 220-93079-30            | KBr Powder (100g)                   | KBr powder for FTIR Analysis   |         |
| 220-93614-07            | KBr Powder (50g)                    | KBr powder for FTIR Analysis   |         |

## FTIR Consumables

| Part No.                | Item Description                      | Description   | Picture  |
|-------------------------|---------------------------------------|---|--|
| 220-93615-01            | Basic Liquid Pack                     | Kit includes a 2mL luer syringe, the Omni Cell assembly, KBr and CaF2 windows - drilled (pair each), KBr and CaF2 windows - plane (pair each), KBr mull cell windows (pair). Also contains Packet of ten assorted rectangular PTFE spacers - two each of 0.05mm, 0.1mm, 0.2mm, 0.5mm and 1.00mm thickness. The pack also contains a packet of five circular spacers for mull cell assemblies - 0.1 thickness, Luer syringe (2mL volume), Bottle of Nujol (25 mL) and bottle of fluourolube (25 mL). |  |
| <b>Individual Items</b> |                                       |   |  |
| 220-93615-03            | Liquid Cell Assembly only             | Liquid Cell (Omni Cell) Assembly only. Does not include windows or spacers  |  |
| 220-93615-04            | Liquid Cell Windows (pair) - KBr      | KBr Windows (pair drilled and non-drilled) for Liquid Cell (Omni Cell)  |  |
| 220-93615-05            | Liquid Cell Windows (pair) - CaF2     | CaF2 Windows (pair drilled and non-drilled) for Liquid Cell (Omni Cell)   |  |
| 220-93615-07            | Assorted PTFE Spacers for Liquid cell | Two each of 0.05mm, 0.1mm, 0.2mm, 0.5mm and 1.00mm thickness  |  |

| Part No.                | Item Description                 | Description   | Picture  |
|-------------------------|----------------------------------|---|--|
| 220-93218-14            | Short Gas Cell, 50mm pathlength  | Include the glass body, o-rings and cell holder.<br>Requires selection of two 38 x 6 mm windows (not included). See below for windows selection |  |
| 220-93218-13            | Short Gas Cell, 100mm pathlength | Include the glass body, o-rings and cell holder.<br>Require selection of two 38 x 6 mm windows (not included). See below for windows selection  |  |
| <b>Individual Items</b> |                                  |   |  |
| 220-93218-22            | KBr Window for Short Gas Cell    | KBr Window for 100mm and 50mm Gas cells. Window size 38x6mm. Contains one window, must buy two for both sides                                   |  |
| 220-93218-23            | ZnSe Window for Short Gas Cell   | ZnSe Window for 100mm and 50mm Gas cells. Window size 38x6mm. Contains one window, must buy two for both sides                                  |  |
| 220-92882-19            | CaF2 Window for Short Gas Cell   | CaF2 Window for 100mm and 50mm Gas cells. Window size 38x6mm. Contains one window, must buy two for both sides                                  |  |

Note: For a wider selection of accessories, small parts, windows, temperature control and long pathlength options (pathlength up to 30m), refer to Shimadzu FTIR accessories brochure or contact your local Shimadzu representative.

**Septa Selection Guide**

| Septum Material         | Description  | Temperature (°C) |
|-------------------------|--|------------------|
| PTFE/Red Rubber         | Most popular and economical choice for general GC and HPLC applications. Used for routine analysis in GC with FID, TCD and FPD detectors or HPLC with UV/Vis and RI detectors. They offer moderate resealability and excellent chemical inertness prior puncture. Low durometer of rubber allows ease of needle penetration. PTFE/Red Rubber septa are not recommended for multiple injections or storage of samples.        | -40 to 110       |
| PTFE/Silicone           | Ideal for use in GC and HPLC applications for its high resealability even after repeated punctures. Good for sensitive analysis (lower background) and storage of samples. PTFE/Silicone septa are soft and more easily punctured, and protects the needle in autosampler.   | -60 to 200       |
| PTFE/Silicone, pre-slit | Share the same chromatographic characteristics, physical and chemical property as non-slit PTFE/Silicone septa. The cross-slit aid in needle penetration for low coring, and prevent formation of vacuum when multiple injection or large volume of sample is withdrawal from vial. However, the pre-slit septa are not recommended for storage of samples due to evaporation of volatile organic solvents through the slit. | -60 to 200       |
| PTFE/Silicone/PTFE      | Recommended for ultra trace analysis, or where there is a longer time between injections. PTFE liners on both sides of Silicone resist coring during penetration, and protects Silicone from chemical attacks.   | -60 to 200       |
| Butyl/PTFE              | The PTFE barrier provides excellent chemical resistance to most solvents. Butyl/PTFE septa has good resealability and suitable for gas sampling due to low permeability.   | -40 to 120       |

**Physical Characteristic and Solvent Compatibility of Materials used for Caps and Septa.**

The chart below displayed the physical characteristic and solvent compatibility of materials used for caps and septa. You might want to test your product under actual conditions of use as there are many factors that can affect chemical resistance.

**Physical Characteristic of Caps and Septa**

| Code  | Description               | Appearance    | Temp. MAX °C | Temp. MIN °C | Autoclavable | Dry Heat | Gamma | Microwavable | Ethylene Oxide | Analytical Purity | Fragmentation* | Hardness†             | Resealability‡    |

The first character indicates the characteristics of septa prior puncture. The second character indicates the characteristics of septa after puncture.

A = Recommended; B = Suitable for most purposes; C = Use with care; D = Not advisable; - = Not tested.

**Product Description****1) Seal**

A seal is an already assembled closure consisting of a cap and septum.

**2) Rubber**

Red Rubber/PTFE is a synthetic rubber which is softer and show less fragmentation than Natural Rubber/PTFE. It has better cleanliness and purity then Natural Rubber/PTFE but inferior than Silicone. Nevertheless, it does not have the outstanding resealability property like Natural Rubber for multiple injections.

**3) Pre-slit septa**

The septa are cross-slit to aid in the needle penetration. The Septa are only cut through the Silicone layer, but not the PTFE layer to avoid the risk of concentration changes due to solvent loss or contamination from the environment.

**4) Ultrabond**

The Ultrabond seal is that the septa and screw cap form an inseparable unit. The molecular structure of the contact areas of the PP screw cap and the septa are modified such that it requires no glue or adhesive between the two to form a firm unit. The Ultrabond products is recommended over a general cap/septa assembly:

- To avoid pushing the septa into the vial when use with very thick and dull needles
- For screw caps with a wide diameter, where a septum cannot achieve any press-fit in the cap

**5) Micro-insert**

A Micro-insert is different from a Micro-vial where it cannot be sealed on its own. The diameter of the Micro-insert is depending on the size of vial opening. A Micro-insert reduces the volume of sample needed and allow the needle to pick up even the smallest sample quantities.

## Bouguer-Lambert-Beer's Law

Light incident on a sample ( $I_0$ ) can be reflected, absorbed, or transmitted. The ratio of light transmitted through the sample to the light incident on the sample,  $\frac{I}{I_0}$ , is defined as the transmittance through the sample (T). Absorbance (A) can be calculated from transmittance using the following relationships:

$$T = \frac{I}{I_0} = 10^{-kcb} \text{ and } \%T = \frac{I}{I_0} * 100$$

$$A = -\log \frac{I}{I_0} = kcb$$

Samples are routinely measured in absorbance because absorbance is proportional to the concentration of the sample (Beer's law) and is proportional to the optical path length (Bouguer's law). The proportionality constant (k) is unique for every species. When the optical path length is 1 cm and the sample concentration is 1 mole/L, the proportionality constant (k) for a given species becomes the molar absorptivity ( $\epsilon$ ) yielding the more commonly seen equation relating absorbance and concentration:

$$A = \epsilon bc$$

For the Bouguer-Beer's law to remain valid, it is necessary to satisfy certain sampling conditions such as being free from stray light, emission, scattering, and reflection.

## Single-beam Configuration

In a Single-Beam design, only one beam passes through the sample compartment. The Baseline and Reference are combined into one measurement and are measured first. Measurement of the baseline in a single beam unit may or may not include a cuvette with solvent depending on the user's preference. After the baseline is acquired, the sample is placed in the beam path and a sample acquisition is acquired. The transmittance is the ratio of the intensity of the sample against the intensity of the baseline/reference at any given wavelength.

$$\%T(\lambda) = \frac{I_{sample(\lambda)}}{I_{baseline(\lambda)}} \times 100$$

Transmittance Equation for a Single-Beam Spectrophotometer

## Double-beam Configuration (Single Detector)

In a Dual-Beam design, the monochromatic light coming from the monochromator is divided into two paths using either a rotating sector mirror or a semi-transparent beam-splitter. The split light beam is passed through the sample compartment in two paths, one passing through the sample cell and the other passing through a reference cell. After passing through the sample compartment the beams are focused onto the detector(s). Dual-Beam designs can have either a single detector (PMT; 190-900nm) or dual detectors (silicon diode; 190-1100nm). In a dual-beam system a baseline measurement is acquired prior to sample analysis, just like in a single-beam system. This is the spectral information that is ratioed against the sample beam to calculate transmittance. In addition, in a dual-beam system, the reference beam is also ratioed against the sample beam. This second comparison serves to compensate for any variation in temperature, voltage, or lamp intensity that may occur as the measurement is acquired. The result is a very accurate and stable acquisition of the sample spectrum over the full wavelength range.

$$\%T(\lambda) = \frac{\frac{I_{sample(\lambda)}}{I_{reference(\lambda)}}}{\frac{I_{baseline\ sample(\lambda)}}{I_{baseline\ reference(\lambda)}}} \times 100$$

Transmittance Equation for a Double-Beam Spectrophotometer

## Detector Transition Wavelengths

Until recently, conventional spectrophotometers used a PMT (photomultiplier tube) for the ultraviolet and visible region and a PbS detector for the near-infrared region. Neither detector, however, is very sensitive near the detector-switchover region. This prevents high-sensitivity measurement in this range. The Shimadzu UV-3600 makes it possible to take high-sensitivity measurements in the switchover range by using an InGaAs detector.

## Absorption Bands for Common Functional Groups\*

| Chromophore | System            | $\lambda_{\text{max}}$ (nm) | $\epsilon_{\text{max}}$ |
